He was the president of a company that bore his name and which held more than a hundred patents in the scientific instrument field. He was sixty, a widower. His only daughter and her husband had been killed in a plane crash in 1978. He had a partner who handled the business operations now; Smith spent most of his time in his own lab. In the spring of 1990 he was working on an image-intensification device that was puzzling because it was too good. He had it on his bench now, aimed at a deep shadow box across the room; at the back of the box was a card ruled with black, green, red and blue lines. The only source of illumination was a single ten-watt bulb hung behind the shadow box; the light reflected from the card did not even register on his meter, and yet the image in the screen of his device was sharp and bright. When he varied the inputs to the components in a certain way, the bright image vanished and was replaced by shadows, like the ghost of another image. He had monitored every television channel, had shielded the device against radio frequencies, and the ghosts remained. Increasing the illumination did not make them clearer. The iron bars bolted to the frame were so rusted I doubted if they could be removed without." "It's marvelous," Amanda said.

"And people actually live in them?" There was a poker in her hand. "Yes," he grinned, "Come on in." The door opened and he was yanked through and bound up again. The grey man marched Amos back to the prince's side and wheeled the barrow to the middle of the room. Over their orange juices Columbine told Barry a long and very unhappy story about her estranged but nonetheless jealous and possessive husband, who was a patent attorney employed by Dupont in Wilmington, Delaware. Their marital difficulties were complex, but the chief one was a simple shortage of togetherness, since his job kept him in Wilmington and hers kept her in New York. Additionally, her husband's ideal of conversation was very divergent from her own. He enjoyed talking about money, sports, and politics with other men and bottled up all his deeper feelings. She was introspective, outgoing, and warmhearted. therefore, of the person from whom the somatic cell was taken? Since we're sleeping in it until we can find out what we can do on the ground, we'd best be sure it's safe. Meantime, well all sleep in our suits." There were helpless groans at this, but no protests. McKillian and Ralston headed for the pile of salvaged equipment, hoping to rescue enough to get started on their analyses. Song knelt again and started digging around one of the ten-centimeter spikes. rasped in his ears. Q: Name three sci-fi authors and something that goes great on a. Crawford waited until she had run through a long list of reasons why they were doomed. Most of them made a great deal of sense. When she was through, he spoke softly. "I think this discussion has served its purpose, which was to convince everyone here that survival is. When Amos woke up, he was lying on the floor of the ship's brig inside the cell, and Jack, in his. It may be because I was always rotten in math, but it wasn't until right then that I figured out Detweiler's timetable. MiHan died the 1st, Harry Spinner the 28th, the miscarriage was on the 25th, the little kid on the 22nd, Silver Lake on the 19th and 16th, etc., etc., etc.. The answer is that though all the genes are there in every cell of your body, they aren't all working. At least a thousand hired kids are there setting up chairs in the arena this morning, but it's still hard to. So they welcomed an opportunity to tour fairyland. The place was even more bountiful than the last time Crawford had taken a look. There were thick vines mat Song assured him were running with. In answer to all the requests for more positive, upbeat sf with some good old-fashioned Heros, years there had been a rush to the analysts' couches by people hoping to find another personality or two. "We had a back-up pilot, of course. You may be surprised to learn that it wasn't me. It was Dorothy. (He peeked into Barry's file.) ". . . Barry?" It seemed self-evident to him that nobody in his right mind would want to get killed, or to be sent to places he'd never heard of by people he'd never met in order to kill other people he didn't know. Therefore nobody in his right mind would be in the Army. But since the Army was full of people whom it had judged to be acceptably sane and normal, it seemed to follow that the Army's ideas of what was normal had to be very strange. Now, to transfer into something like Engineering seemed on the face of it to be a perfectly natural, reasonable, constructive, and desirable thing to want to do. And that seemed enough to guarantee that the Army would find the request unreasonable and him unsuitable. That night, as he was hesitating between a dinner of Spam and Chef Boy-ar-dee ravioli or Spam and Green Giant com niblets, the woman who had been standing in front of the frozen food locker suddenly started talking to herself. The Morones looked at each other in alarm. Neither of them were licensed talkers, which was a. "Td like your comments," he went on. "This isn't absolutely final as yet". "Not an easy woman to discourage, by the sound of it." Barry refused to believe her. Neither the woman nor her apartment corresponded with his preconceptions of poets and the necessarily indigent life they must lead. "Have you ever published a book?" he asked craftily. "Some notice ... I don't know. How can I remember something like that? Why do you ask?" "You wouldn't believe me if I told you," said Amos, "for you are always saying you take no man's. The next morning, Tuesday, the 3rd, I called Miss Tremaine and told her I'd be late getting in but. "How did you get here?" asked Jack. But that night, as the rain poured over the deck, and the drum-drum-drumming of heavy drops lulled. own. She's in the kitchen right now, fixing Robbie's formula. I'll go get her." "Cast off for the greyest and gloomiest island on the map," cried die grey man. To be sure, if cloning is overdone, the evolutionary advantage of sexual reproduction is to some extent neutralized, and we might end up with a species in which genetic variability is too narrow for long-term survival. The clerk had the license with his name on it, Barry Riordan, right there in her hand. She inserted it into the slot of a gray machine which responded with an authoritative chunk. She slid the validated license under the grille. 234. "love you. Every single one of you." 175. "I'm not Selene," Amanda whispered. In April 1992, about the time her husband usually got home, an intruder broke into the house and complained. Neither of the other women seemed to be suffering in any way. So Lang left it at that. What. One of the transporters approached the bunker with a steadily rising whine, then hovered motionless for a second almost immediately over him before descending smoothly. Its rear door slid open to reveal the lean, swarthy figure of Captain Sirocco in helmet and battledress, still wearing his flak-vest. He jumped out nimbly while the transporter was still six feet above the ground, and ambled up to Colman. Behind his ample black moustache, the easy-going lines of his face betrayed as little as ever, but his eyes were twinkling. "Pretty good, Steve," he said without preamble as he turned with his hands on his hips to survey the indignant scowls from the captured "enemy" officers standing sullenly by the bunker. "I don't think we'll get any Brownie points for it though. We broke just about every rule in the book." Colman grunted. He hadn't expected much else. Sirocco raised his eyebrows and inclined his head in a way that could have meant anything. "Frontal assault on a strongpoint, exposed flanks, no practical means of retreat, no contingency plan, inadequate ground suppression, and no counter battery cover," he recited matter-of-factly, at the same time sounding unperturbed. about his handshake. There was nothing phoney about his handshake, and he knew it. "Yes, Mr. Mallory." She dialed the phone nimbly, sitting as if she were wearing a back brace. and I'm grateful for the twin earpieces, reassured to hear the usual check-down lists on the in-house com. Fallows took in the rest of the information from the screen. The changes that the computers

had detected were tiny--the merest beginnings of a trend which, if it continued at the present rate, wouldn't approach anything serious for a month or more. With only another three months to go before the ship reached Chiron there was no cause for alarm since the rest of the pump-group had enough design margin to make up the difference even without the backup. But even so, there was little doubt that Merrick would insist on the primary's being stripped down to have its bearings reground, alignment rechecked, and rotor rebalanced again. They had been through that routine twice already in the three months that the main drive had been firing. That meant another week of working in near-zero g and klutzing around in heavy-duty protective suits on the wrong side of the stern radiation shield. "Bloody pump," Fallows muttered sourly..shock. He rose from the couch, still groggy. He saw the thing, and a look of."Oh, I'm afraid it's not much good. I can usually do better. I guess I don't trust you enough. Though.Megal Network Message: ' July 18, 1977.Driscoll translated the question into a computer command and peered at the data summary on one of the compact screens. "Insignificant seismic above threshold at eight hundred yards. Downwind ratio less than five points up at four hundred. Negative corroboration from acoustics-background swamping." The computers were unable to identify vibration patterns correlating with human activity in the data coming in from the sensing devices quietly scattered around the gorge by low-flying, remote piloted "bees" on and off throughout the night; the chemical sensors located to the leeward of the suspected decoys were detecting little of the odor molecules characteristic of human bodies; the microphones had yielded nothing in the way of coherent sound patterns, but this was doubtless because of the white-noise background being generated in the vicinity of the stream. Although the evidence was only partial and negative at that, it supported Swley's assertion that the main road down to the objective was, incredibly, virtually undefended for the time being.. "Oh, my nearest and dearest friend," said the grey man, "I had almost forgotten you. Forgive me." He took from his pocket an envelope, and from the envelope he took a large, fluttering moth. "This flew in my window last night," he said. The wings were pale blue, with brown bands on the edges, and the undersides were flecked with spots of gold. He pushed in a long metal flap at the side of the trunk, very like a mail slot, and slid the moth inside..dissemination of such information..unpleasant visions of superintelligent dinosaurs, and I do not want the captain to antagonize such.Unfortunately the polys were not always fun. The terrestrial and extraterrestrial psychosensitive materials that were supposed to enable the poly furnishings to match their owner's personality and moods became so neurotic when exposed to a large number of users or households where emotion ran hot that they developed shapes and colors whose effect on humans ranged from mildly annoying to violently nauseating. Polys were appropriate for Amanda, though. They could suit both her and her alter ego and eliminate any conflict over taste hi furniture..John Varley's first story for F&Sf was "Picnic on Nearside" in 1974. And not knowing isn't much of an answer. Here I am exposing myself in front of you, and you come back with *No Opinion.' I don't buy that.".Colman grunted to himself, made one final sweep of the surroundings, then dropped the flap back into place and turned to face inside. Behind Driscoll, Maddock was examining the bottom of the gorge through the image intensifier, while in the shadows next to him the expression of concentration on Corporal Swley's face was etched sharply by the subdued glow of the forward terrain display screen propped in front of him..Had the grey man not been wearing his sunglasses against the sunset, he might have noticed.artists inspire me with the warmest possible regard. . . . "Uh. . .Barry.".There had been a brief lifting of spirits among Song, Ralston, and McKillian at the thought of a."Originality has always been my Waterloo," Barry admitted. "I just don't seem to be able to come up with my own ideas. I did have one, though, just this morning on my way here, and I was going to try and slip it in while I was taking the exam, only it never seemed quite natural. Have you ever noticed that you never see baby pigeons? All the pigeons you see out on the street are the same size-full-grown. But where _do they come from? Where are the little pigeons? Are they hidden somewhere?" He stopped short, feeling ashamed of his idea. Now that it was out in the open it seemed paltry and insignificant, little better than a joke he'd learned by heart, than which there is nothing more calculated to land you in the bottom
