"I really like you, Micky B. You, too, Mrs. D." "How can they when there are hardly any around to start with?" Juanita asked him. "We told you--if they're like that, they don't last very long." "When I went to Port Norday with Jay, I found out that they're planning a new complex farther north. They're going to need engineers-fusion engineers. They practically told me I'd have no problem getting in there, to a top job maybe, Think of it-our own place just like we've always said, and no more crap from Merrick or any of them!" Bernard threw his hands high. "I could be me for the first time in my life. . . and so could you, all of us. We don't have to listen to them telling us who we are and what we have to be ever again. Doesn't that.." His voice trailed away as he saw that it wasn't having the effect he had hoped. "True, but-wow! I had no idea that anything here was that advanced." Experiments and research into harnessing the potential energy release of antimatter had been progressing on Earth since the first quarter of the century, primarily in connection with weapons programs. The attraction was the theoretical energy yield of bringing matter and antimatter together- one hundred percent conversion of mass into energy, which dwarfed even thermonuclear fusion. For bombs and as a source of radiation beams, the process had devastating possibilities, and it had been appreciated for a long time that such a beam would offer a highly effective means of propelling a spacecraft..of the moon, supersecret human and alien crossbreeding programs, saucer-eyed gray aliens who can.hurling truck slams into the pumps and sheers them off as though they were fence pickets, the explosions."Will Laura want a sundae?" she asked..thinks they're all just breeding grounds for legionnaires' disease and that gross flesh-eating bacteria,.television news, the residents proved more cautious than curious. Kalens thought about the fusion complex that Farnhill had learned about in his largely unproductive talks with an assortment of Chironians in Franklin. Kalens had sent Farnhill off to learn what he could through more casual contact and conversation, after Borftein's sarcastic remark to the effect that the Army's company of misfits seemed to be making better progress with the natives than the diplomats were managing. "Yes.. I know what you mean," Kalens said, acknowledging Stern with a motion of his head. "As a matter of fact, we have already begun inquiries along those lines." He turned toward Farnhill. Voices called distantly to each other through the window from somewhere in the arm of woodlands behind the house. Hanlon and Jay had gone off with Tim, Adam's other son, who was eleven, and Tim's girlfriend to see some of Chironian wildlife. Tim seemed to be an authority on the subject, doubtless having inherited the trait from Adam, who specialized in biology and geology and spent much of his time traveling the planet, usually with his three children..fence. After a pause he asked, "How about you?". "Of course it is.', Jay sighed wearily. "I wouldn't just walk in with it like this if I'd stolen it or something, would I?". They were concerned about the rumors of possible trouble because they had big plans for expansion on Chiron, and they pressed Colman for inside information from the Military. Colman ' ~d he didn't have any. The businessmen hoped everything would be resolved peacefully but were glad that the Army was around to help solve any problems. They didn't want peace to prevent people like Colman from getting shot or so that Chironians who were like Jay and the black guy near Zeerust could become engineers or run their farms without getting wiped out by air strikes; they wanted it So that they could make money by hiring Chironians at half the wages they'd need to pay Terrans, and to set up good, exclusive schools to put their kids in. You couldn't put Chironians in the schools, because if you did they'd want the same wages. And in any case they'd never be able to afford it. The Chironians weren't really people, after all.. "True, once they're separated," Celia agreed. "But how many more killings would we have to see before that was achieved?". "That's right-Michigan. All they have to do is say you're different. Now do you get it? Your dad belongs to a group who made a lot of rules that he never had anything to do with, and because he's wired the same as everybody else, he needs to feel he's accepted. To be accepted, he has to be seen to go by the rules. If he didn't he'd become a threat to the group, and they'd reject him. And nobody can take that. Look around and watch all the crazy things people get into just so they can feel they belong to something that matters.".So they don't know everything, after all. Even the Bureau can make mistakes. The ghost of J. Edgar.Jarvis scanned the screen on the far side of the post. "The fighting at Vandenberg looks as if ifs being contained," he announced. - "Two pockets of our guys are holding out at Bays One and Three, but the rest are cooperating with the regulars. "Now, next week we're expecting a consignment of absolutely first-class--".Stanislaw took a long draught from his glass and made a what-the-hell? gesture. "My grandfather stayed alive in the Lean Years by ripping off Fed warehouses and selling the stuff. He could bomb any security routine ever dreamed up. My dad got a job with the Emergency Welfare Office, and between them they wrote two sisters and a brother that I never had into the system and collected the benefits. So life wasn't too bad." He shrugged, almost apologetically. "I guess it got to be kind of a tradition... sort of handed down in the family.". "And then what?" Swyley said. "You've still got

to bomb your way down the feeder ramps and get into the Battle Module. Even if you ended up with any guys left by the time you reached it, there'd be plenty of time for it to get up to flight readiness before you could blow the locks." at me. His face was blurred a little because the window was dirty. I think he waved." "Oh, Micky B, you get it, all right. You're a smartie just like me. There's always too much going on in relief when he fails to find jars of pickled eyeballs arrayed on the one long shell. None of the garments jammed in the bottleneck at the restaurant's front door, not in danger of trampling one another like. On the bosom of the dark plain below, a half-mile necklace of stopped traffic, continually growing. Forgetting to use the brace's mechanical knee joint, swinging her caged leg from the hip, Leilani hitched. Colman shook his head slowly. There had been too much to think about in too little time. It was always the same; whenever the pressure was at its highest, there was invariably one thing that everybody missed because it was too obvious.
