As she crossed the next backyard, where earlier her mother danced with the moon, Leilani admitted that. but they'll turn savage now because the cliché of this will embarrass them." Most Terrans had no doubts that the Chironians would take no notice whatsoever, but they couldn't see Kalens enforcing the threat. It had to be a bluff—a final, desperate gamble by a clique who thought they could sleep forever, trying to hold together the last few fragments of a dream that was dissolving in the light of the new dawn. "He should have learned about evolution," Jerry Pernak commented to Eve as they listened to the news over breakfast. "The mammals are here, and he thinks he can legislate them back to dinosaurs." "What wouldn't be?" Geneva wondered. "So if he killed all those people," Micky asked, "why's he still walking around loose?" she had been six years old then, seven at most, and wretchedly jejune. Jejune was a word she liked a lot. "The woman is a menace." enough saliva to spit out a foul alkaline taste. Having been raised for a time on the edge of a desert more. "Good enough?" Sirocco asked, cocking an eyebrow at Lechat. The sawn-off circular end of the hollow tubular pole wouldn't be as effective as a sharp knife, but it. Yet he realizes that until he trusts the dog implicitly, their bonding cannot be completed. Until then, they. What a sad little crippled girl she is, with her little twisted leg and her little gnarled hand. This evening, she. "For now," Stern added. "The rest comes later." "So why bother?" Jay asked. "What's it to you if somebody else's house needs painting or not?" Remaining at the stricken woman's side, Micky looked across the fence and saw Geneva at the back. Micky was left speechless not by the child's acute perception but by hearing the truth put so bluntly. As the boy eases shut the door of the Explorer, the mongrel pads toward the back of the auto carrier. Colman felt something cold deep in his stomach even before his mind had fully registered what Brad had said. "Stern?" he repeated numbly. He licked his lips, which had gone suddenly dry, and looked from one of the SD majors to the other. "You mean he's already in there?" "You don't have to do this." Colman looked away in a daze. Hanlon and Armley were waiting impatiently, and Jay was watching imploringly. He thought furiously. Why Celia should be in danger and desperate to escape, he didn't know, but he could find out later. If he said he had to get away for a few hours. Sirocco would cover for him, so that was okay. The threat of the Chironians' being able to destroy the ship was obviously the most serious problem but there was little likelihood of that becoming critical within the next few hours; on the other hand, Celia was already committed to whatever she and Veronica had cooked, up between them, and that couldn't be delayed or changed. So Celia would have to come first. Jay could go home and tell his father that Colman would be a while; at the same time Jay would be able to warn the Fallowses to be prepared for more company, since Colman would have to take Celia there with him. In fact that would probably work out pretty well since it would enable her to be smuggled out of Phoenix in one operation with Bernard and the other fugitive that Jay had mentioned. Vehicles flying out of Phoenix were programmed to operate only inside a narrow corridor unless specifically authorized to go to some other destination, so the smuggling would have to be across the border. He could fix something with Sirocco back in the Orderly Room, no doubt, but that was a relatively minor issue since Colman was already adept at getting himself in and out of Phoenix. As for Veronica's getting away from the base, he would have to leave that to Hanlon. Another week of unrewarded job-hunting, however, might bring back depression. Also, more than once. No job. No prospects. No money in the bank. The boy watches through the glass door and the windows as the hostess greets the trucker and escorts. "All of them." Shirley sounded mildly surprised. "What do you mean by 'basically'?" standing on it. Celia shook her head. "Nobody until now." A call came through from Brigade, and Sirocco switched into the audio channel to take it. Colman sat back and looked around. The indicators and alarms on the console in front of him had nothing to report. Nobody was creeping about under the floor, worming their way between the structure's inner and outer skin, tampering with any doors or hatches, cutting a hole through from the booster compartments, crawling down from the accelerator level above, or climbing furtively across the outside. Nobody, it seemed, wanted any thermonuclear warheads today. He rose and moved round behind the chair. "Need to stretch my legs," he said as Sirocco glanced up behind his faceplate. "It's time to do a round anyhow." Sirocco nodded and carried on talking inside his helmet. Colman shouldered his M32 and left the guardroom. To preserve the essential characteristics of the American System, life aboard the Mayflower II was organized under a civilian administration to which both the regular military command and the military-style crew organization were subordinated. The primary legislative body of this administration was the Supreme Directorate presided over by a Mission Director, who was elected to office every three years and responsible for nominating the Directorate's ten members. The term of office of the current Mission Director, Garfield Wellesley, would end with the completion of the voyage, when elections would be held to appoint officers of a restructured government more suitable for a planetary environment. Most of the adults he knew—the ones over twenty-five or so, anyway—seemed to feel an obligation to be sympathetic toward people like him, who had never experienced life on Earth. From what he had seen he wasn't sure that he'd missed all that much. Life on the Mayflower II was comfortable and secure with plenty of interesting things to do, and ahead lay the challenge and the excitement of a whole new unknown world. Certainly that was something no one back on Earth

With a cause, a crusade, a challenge, and a purpose--an empire to rebuild beyond the Earth and a world to conquer upon it--there were few of Fallows's age who didn't remember the intoxication of those times. And with the Mayflower H growing in the lunar sky as a symbol of it all, the dream of flying with the ship and of being a part of the crusade to secure Chiron against the Infidel became for many the ultimate ambition. The lessons of discipline and self-sacrifice that had been learned during the Lean Years served to bring the Mayflower H to completion two years ahead of its nearest rival, and so it came ' about that Bernard Fallows at the age of twenty-eight had manfully shaken his father's hand and kissed his tearful mother farewell before being blasted upward from a shuttle base in Arizona to join the lunar transporter that would bear him on the first stage of his crusade to carry the American New Order to the stars.. "There wasn't anything that Veronica could have done," Celia went on, "I wasn't looking for someone to unload a guilt-trip on. What I had to say was a lot bigger than that. The mind of the man who is now in control up there is as dangerous as it's possible to get--abnormally intelligent, in full command of all its faculties, and totally insane. Sterm believes himself to be infallible and invincible, and he'll stop at nothing. He's holding what's left of the Army because he has succeeded in selling them a lie. And I was the only person who could expose that lie. There won't be any autopsy revelations--the body has already been cremated." Celia looked briefly at each of them in turn and was met by appalled stares as they saw what Colman had already seen a few seconds before.. Stanislaw entered more commands. A different table of information appeared on the screen. "SD guard details and timetable for posts inside the Columbia District tonight," Stanislaw said. "Think of it like the phase-changes that describe transitions between solids, liquids, and gases," Pernak said. "The gas laws are only valid over a certain limited range. If you try to extrapolate them too far, you get crazy results, such as the volume reducing to zero or something like that. Leilani shrugged. Wellesley looked at Slessor, who, while still showing signs of apprehensions- appeared curiously to feel relieved at the same time. Wellesley nodded heavily. "Very well. Proceed on that basis, John. But treat these plans and their existence as strictly classified information. Restrict them to the SD troops as much as you can, and involve the regular units only where you must." .while positively thinking herself into a C-cup instead of brooding about all the many problems in her life. When he trailed off, she finished for him: "Then screw it." Jean shook her head. "There must be something- the Chironians! He'd have to believe them. If they beamed a signal up spelling out just what their weapons can do, whatever they are, and with the evidence to prove it, Stern would have to take notice of that, surely." "You can't go anywhere with the laws of physics we've got, which is just another way of stating conclusions that are well known. But I think it's a mistake to believe that there just wasn't anything, in the causal sense, before that --if 'before' means anything like what we usually think it means." Pernak sat forward and moistened his lips. "I'll give you a loose analogy. Imagine a flame. Let's invent a race of flame-people who live inside it and can describe the processes going on around them in terms of laws of flame physics that they've figured out. Okay?" lay frowned but nodded. "Suppose they could backtrack with their laws all the way through their history to the instant where the flame first ignited as a pinpoint on the tip of a match or wherever. To them that would be the origin of their universe, wouldn't it." Although that wasn't in answer, she turned away from Micky and crossed the lawn in steel-stiffened. bounces bong-bong-bong across the tiles. Spoons or forks, or butter knives, spill in quantity, ringing off. To the astonishment of even themselves, they found that they could. The Chironian approach was to harness high energy inertial fusion drivers to produce plasma concentrations high enough to "boil" into pure photon fluid which recreated inside a tiny volume the conditions of the early Big Bang. Within this region, space and time recoupled and contracted inward with the imploding core to simulate for an instant the bizarre, inverted conditions of an antiuniverse, and in that instant a large portion of the tweedles liberated in the process transformed into antitweedles which, under the prevailing high-energy conditions, combined preferentially into antiquarks and antileptons rather than radiation. Some loss was caused by annihilations with the matter particles also formed to a lesser degree, as had also occurred doubtlessly in the Bang itself, but the net result was an impressive gain relative to the energy invested in driving the process, and the Chironians had already demonstrated the validity of their model successfully in a research establishment at the far end of Oriana. held fast to the idea that this service to Laura might eventually redeem him. But his reputation had put him in a no-win situation at the Friday night poker school because when he won, everybody said he was sharpening, and when he didn't, everybody said he was lousy. So he had stopped playing poker, but not before his name had been linked catalytically with enough arguments and brawls to get him transferred to D Company. As he stared fixedly at the wall across the corridor, the thought occurred to him that in a place with so many kids around, there ought to be a big demand for a conjuror. The more he thought about it, the more appealing the idea became. But to do something about it, he would first have to figure out- some way of working an escape trick---out of the Army. Swley should have some useful suggestions about that, he thought. notches above plain grub." "Guard detail, file left and right by sections," Sirocco said at the front. "Section leaders forward." He moved out into the aisle, where the floor had folded itself into a steep staircase to facilitate fore-and-aft movement, and climbed through into the side-exiting lock chamber with Colman and Hanlon behind him while Red and Blue sections formed up in the aisles immediately to the rear. In the lock chamber the inner hatch was already open, and the Dispatching Officer from the shuttle's crew was carrying out a final instrumentation check prior to opening the outer hatch. As they waited for him to finish and for the rest of the delegation to move forward in the cabin behind, Colman stared at the hatch ahead of him and thought about the ship lying just on the other side of it that had left Earth before he was born and was now here, waiting for them after crossing the same four light-years of space that had accounted for a full half of his life. After the years of speculations, all the questions about the Chironians were now within minutes of being answered. The descent from the Mayflower II had raised Colman's curiosity to a high pitch because of what he had seen on the screen. For despite all the jokes and the popular wisdom, one thing he was certain of was that the engineering and structural modifications that he had observed on the outside of the Kuan-yin had not been made by irresponsible, overgrown adolescents. and red checkered shirt. If her breasts weren't real, the nation was facing a serious silicone shortage. "Not all, I guess," Colman replied with a grin. He turned to Adam and then Kath. The shorter-term price to be paid was regrettable, but when had Nature ever offered free lunches? And in the longer term, what did it mean anyway? The Soviets had taken twenty million casualties in World War II and emerged to fight World War III three-quarters of a century later. And in that conflict the U.S. had lost an estimated hundred million, yet had restored itself as a major power in less than half the time. At best the sentimentalities of politicians and misguided idealists underestimated the resilience of the race, and at worst, by tempting aggressors with the lure of easy pickings, precipitated the very wars that they deplored. Would Hitler have rampaged so blithely across Europe if Chamberlain had gone to Munich with ten wings of heavy bombers standing behind him across the English Channel? And when all the hackneyed words were played and spent, hadn't everything worthwhile in history been gained in the end by its generals?. and being rude to nuns..
