"I made no mention of your wanting to save yourself physically. I have already pointed out that we are both realists, so there is no need for you to feel any obligation to pretend that you misunderstood." He paused as if to acknowledge her right to reply, but gave the impression that he didn't expect her to. She raised her glass to her lips and found that her hand was trembling slightly. Sterm resumed. "The dream has crumbled away, hasn't it, Celia. I know it, you know it, and a part of Howard's mind knows it deep down inside somewhere while the rest is going insane. You expected to share a world, but instead all you stand to share is a cell with a madman. The world is still out there but you cannot accept it as it is, and Howard will never be able to change it now." Sterm extended a hand expressively. "And the future awaits you." He paused again, watched as Celia lowered her eyes, and nodded. "Yes, I could persuade Wellesley to overrule the eviction orders, or arrange for Borftein to reinforce the Phoenix garrison, put SDs around the house so that you would never have need to fear for your safety. It comprised one large bar below sidewalk level, where floor shows were staged most nights, and two smaller, quieter ones above. Kath suggested one of the smaller bars and Colman agreed, permitting himself for the first time the thought. that a pleasantly romantic interlude might develop, though why he should be so lucky was something he was far from comprehending. If it happened, he wasn't going to argue about it..Apparently some of Padawski's friends had the idea that the Chironian women were among the things that could be had for the taking on Chiron, and two of them had persisted in pressing lewd advances upon the two girls at the bar despite their being told repeatedly and in progressively less uncertain terms that the girls weren't interested. The soldiers, who had been drinking heavily, became angry and even more unpleasant, paying no attention to dour warnings from around the room. An argument developed, in the course of which Ramelly grabbed one of the women and handled her roughly. She produced a gun and shot him in the leg. There would probably have been no more to it than that if Wilson hadn't seized the gun and turned it on the Chironians who were about to intervene, at which point another Chironian had shot him dead from the back of the room..but which seemed only impossibly difficult now.. "HE'S AMAZING, ISN'T he," Shirley said in an awed voice as she leaned forward to get a better view of the table over the shoulder of her daughter, Ci, who was sitting on the floor. "It must be a genetic mutation that makes sticky fingers or something.". "Hell, Dorothy, where you are, they shoot little dogs like Toto for sport. Kalens was asking from the screen. "Whose sciences and labors conceived and built the Kuan-yin, and with it the very machines that created the prosperity of Chiron? Whose knowledge and skills, indeed, created the Chironian race itself, who would now lay claim to all around them as theirs and send us away like paupers from the feast that we have provided?" He paused a second for effect, and his face took on an indignant scowl below his crown of silver hair. "I say no! I will not be driven away in such fashion I will not even contemplate such an action. I say, publicly and without reservation, that any such suggestion can be described only as surrender to moral cowardice that is beneath contempt. Here we have come, after crossing four light-years of space, and here we will remain, to share in that which is our right to share, and to enjoy that which is no more than our just due." "Oh, I dunno---some of the things you said, maybe." "Sucky day, Aunt Gen." "Who does, dear?" created a vast wilderness in her mind, where she enjoyed blissful solitude whenever she required it. Providing for Laura was the reason that he worked, the reason that he lived in a low-rent apartment, his neck, looking for the source of the sound, as a slipstream of warm desert air cuffs his face and tosses. "Oh, yes, Gaulitz definitely. I've plans for Herr Gaulitz." "A government job?" "The ship's changed a lot since then though," Colman remarked. "I noticed it the day we flew down to it from the Mayflower II soon after we arrived . . . when Shirley and Ci met Tony Driscoll. The front end must be at least twice as big as it used to be." "What an impressive name," Geneva said. "Like a Supreme Court justice or a senator, or someone smells threatening or at least suspicious. Anita's eyes blazed as her shock began wearing off and dissipated itself as anger. "Why should I? Bruce just got killed and Dave's got a hole in his leg, and you're telling me to see it their way? What kind of a man are you anyhow?" She sneered past Colman's shoulder at Kath, who was returning the communicator to her pocket. "I can see why. It didn't take you long, did it? Is she good?" "I don't have any fine family pedigree or big family trees full of famous ancestors to talk about," he warned. which is probably something more psychologically complex, as before. Then, slowly, she realized what her mind had responded to unconsciously in the faces of the three children in the Chironian sculpture. The artist had been not merely an expert, but a master. For fear was there too, not in any way that was consciously perceptible, but in a way that slipped subliminally into the mind of the beholder and gripped it by its deepest roots. That was why she had felt disturbed all the way back from Franklin. But there was still something else. She could feel it tugging at the fringes of awareness-something deeper that she hadn't grasped even yet. She turned her eyes to the sculpture again. coming in. "Which you're wearing," Noah guessed, pointing at the guy's. Colman nodded to himself and wiped his mouth with a napkin from the dispenser on the table while he tried to form the right answer. He was stuck in the Army but wanted to become a professional engineer; Jay could walk into being an engineer but thought he wanted to be in the Army. There would be no point in being scornful and listing all the reasons why it might not be such a good idea-Jay knew all those and didn't want to hear about it. the interstate before fleeing north into the wildland. "Is that just a copy file, or are you displaying the master schedule?" Lechat inquired. Until now, Micky hadn't noticed this deformity. "Everyone's got imperfections," she said. Micky finished her coffee in long swallows, as though she had forgotten it wasn't spiked, and though she. "When did I say that?" Leilani asked disingenuously. "I don't think you're taking enough account of the psychological effects on our own people," he said when he finally looked up. "Morale is high now that we're nearly there, and I don't want to spoil it. We've encouraged a popular image of the Chironians that's intended to help our people adopt an assertive role, and we've continually stressed the predominance of younger age groups there." He shook his head. "Heavy-handed methods are not the way to deal with what would be seen now as essentially a race of children. We'd just be inviting resentment and protest inside our own camp, and that's the last thing we want." "Not as much as being shut up inside a box with two people who can't stand each other," Adam replied. "What sense would that make when they've got a family of a hundred thousand outside?" "I'm not shooting this. My associate is at an attic window of the place across the street. We made league." "I told you yesterday. They shot like six hundred thousand volts of electricity through her head?" up here"? she tapped her right temple? "and sometimes old movies seem as real to me as my own past." wasn't in view, but that didn't mean she wasn't present. By this hour, old Sinsemilla would have been across Geneva's face at the counterfeit memory of her anguish-filled love affair with a heroin junkie; but. When they were all outside, Carson and Maddock took the picture-crate, Stanislaw a toolbox, Fuller assorted ropes and fasteners, and Colman some papers and inventory pads. Veronica carried a large roll of packing foam on her shoulder, keeping it pressed against the side of her face. Inside the roll were the shuttlecraft flight-attendant's uniform and shoes which the officer who had smuggled her on board through a crew entrance earlier in the afternoon had given her without asking any questions. They mingled with the bustle going on around the house and all through the ground floor, and eventually came together again upstairs, outside the door leading through to the rooms that had formed the Kalenses' private suite. Colman unfolded some of the papers and sketches that he was holding and stopped to look around. After a few seconds he gestured to attract the attention of the SD guard who was standing disinterestedly near the top of the main stairs, and nodded his head in the direction of the door. "Is that the way into the bedroom and private quarters?" he asked. CHAPTER NINETEEN. "Leilani Klonk." He was wearing an open necked shirt of intricately embroidered blues and grays, and plain navy blue slacks held up with a belt. His features looked vaguely Asiatic. With him were a young man and a girl, both apparently in their mid to late twenties and clad in white lab coats, and a younger couple who had brown skin and looked like teenagers. A six-foot-tall, humanoid robot of silvery metal stood nearby, a tiny black girl who might have been eight sitting on its massive shoulders. Her legs dangled around its neck and her arms clasped the top of its head..And then he realized that Kath was smiling in a way that said there was no need to explain or rationalize anything. Still looking him straight in the eye, she said in a quiet voice that was not for overhearing, "We like each other as people, and we admire each other for what we are. There isn't anything to feel hung up about on Chiron. People who feel like that usually make love, if that's what they want to do." She paused for a second. "Isn't that what you'd like to do?" "He ought to be given a chance to go and look at it," Borftein agreed with a nod. "What would be the best way to arrange something like that?".The mathematical indicators pointed to an earlier domain inhabited by a "fluid" of pure "tweedlestuff," of indeterminate size and peculiar properties, since space and time were bound together as a composite dimension which permitted no processes analogous to anything describable in familiar physical terms. There were grounds for supposing that if an expanding nodule of disentangled space and time were introduced arbitrarily through some mechanism'-pictured by some people as a bubble appearing in soda water, although this wasn't really accurate.-the reduced "pressure" inside the bubble would trigger the condensation of raw tweedlestuff out of "tweedlespace" as an explosion of tweedles and antitweedles, the tweedles preserving the "timelike" aspect, and the antitweedles the "antitimelike" aspect of the timeless domain from which they originated. Their mutual affinity would precipitate their combination into a dense photon fluid in which timelessness became reestablished, which tied in with Relativity by explaining why time stood still, for moving photons and accounting for the strange connection in the perceived universe between the rate at which time flowed and the speed of light. The high-energy conditions of the Primordial photon fluid, the density of which would have approximated that of the atomic nucleus, would favor the formation of "tweeplet" entities to give rise to matter interacting under conditions dominated by the strong nuclear force, which manifested itself to restore nonAbelian gauge symmetry with respect to the variance introduced by the separation of space and time. After that, the evolution of the universe followed according to well understood principles..hard and is half asleep on its feet..Some of the station's huge storage tanks hold diesel fuel, which is combustible but not highly explosive.,tapped a time or two, Curtis goes to the bedroom window..gazing out across the enormous kitchen, wide-eyed, watching the hunters. He turned to Adam and then Kath. "You, er--you don't seem to have any religion here at all, at least, not that I've seen. Is that right?" Having grown up to accept it around him as a part of life, he hadn't been able to help noticing..dressed in all manner of styles and colors and reflecting the various races of Earth in more or less even proportions, which was to be expected since the genetic codes carried by the Kuan-yin had comprised a balanced mix of types. Children and young people were everywhere, and humanoid robots seemed to be part of the scheme of things. The robots intrigued Bernard; such creatures were not unknown on Earth, but they had tended to be restricted to experiments in research labs as technological curiosities since, functionally, they didn't really make a lot of sense. Presumably the Chironian robots had been developed from the machines that had raised the first Chironians, which had-been designed not in the form of tin men at all, but to suit their

purpose--as warm-bodied, soft surfaced tenders. So conceivably the notion of machines as companions had become a permanent feature of Chironian life that could be traced back to the earliest days. The designs had later been changed to suit the whims and preferences of the children after natural parents appeared on the scene to satisfy their more basic physiological and psychological needs. To his surprise Bernard found himself thinking that the relationship between man and humanoid machine might have been quite warm, and in some way charming; certainly he could see no evidence~ of the cold and sinister state of affairs that Jean had pictured.. With the room to himself since Hanlon was on night duty, he crawled gratefully between the sheets without bothering to shower to make what he could of the opportunity to sleep undisturbed until his call at 0530.
