

## **SATAN SKAL DU HETE**

So does Curtis. Lechat thought for a while as he continued to eat. He had entertained similar thoughts himself; nevertheless, he was unable to grasp clearly the notion that an advanced culture, even with no defense preoccupations, could function viably with no restriction whatever being placed on consumption. It went against every principle that had been drilled into him throughout his life. Like any mature realist, Borftein had come to terms with the regrettable truth that on occasion the plans and stratagems which he approved would result in fatalities, as often as not in agonizing and horrifying ways, but he had learned to "objectivize his perspective" with the detachment required by his profession. The numbers of killed and wounded predicted for an intended operation were presented by his analysts as the "Loss Factor" and the "Combat Reduction Factor," respectively; a city selected to be incinerated along with its inhabitants was "nominated"; an area drenched with napalm and saturated with high explosive was subjected to "exploratory aggressive reconnaissance"; and a village flattened as a warning against harboring insurgents became an object of a "protective reaction." Such were the rules. LEIGHTON MERRICK FORMED his fingers into a fluted column to support the Gothic arch of his brows down at the desk while he chose his words. "Ah, I've been looking over your record, Fallows," he looked up. "It shows a consistent attention to detail that is very pronounced . . . everything thorough and complete, and properly documented. It's commendable, very commendable . . . the kind of thing we could do with more of in the Service." "Me? Hell no. What would I do with it?" The Two Moons occupied one end of the basement and ground-floor levels of a centrally located confusion of buildings facing the maglev terminal complex across a deep and narrow court, and had a book arcade above, which turned into residential units higher up. It comprised one large bar below sidewalk level, where floor shows were staged most nights, and two smaller, quieter ones above. Kath suggested one of the smaller bars and Colman agreed, permitting himself for the first time the thought that a pleasantly romantic interlude might develop, though why he should be so lucky was something he was far from comprehending. If it happened, he wasn't going to argue about it. had to do what needed to be done. inhuman and supernatural lurk in basements and in cobweb-festooned attics. In graveyards at night. "Judging by the men I've fallen for, ice cream beats love. to kill him a tasty mouse." "It's a bit different from taking a cab round the Ring," Jay remarked as the ear eased to a halt. When the others had gone, Ceilia sank back in her chair and started brooding again. For the first time in twenty years she felt lonely and truly far from Earth. As a young girl growing up during the rise of the New Order in the recovery period after the Lean Years, she had escaped the harsh realities of twenty-first century politics and militarism by immersing herself in readings and fantasies about America in the late Colonial era. Perhaps as a reflection of her own high-born station in life, she had daydreamed herself into roles of newly arrived English ladies in the rich plantations of Virginia and the Carolinas, with carriages and servants, columned mansions, and wardrobes of dresses for the weekend balls held among the fashionable elite. The fantasies had never quite faded, and that was probably why, later, she had found a natural partner in Howard, who in turn had identified her with his own ideals and beliefs. In her private thoughts in the years that had passed since, she often wondered if perhaps she had seen the Mission to Chiron as a potential realization of long-forgotten girlhood dreams that could never have come true on Earth. behind her like the finished product of a snake-making machine. "And exactly what is that supposed to mean?" Stern demanded. Curtis shudders. His fevered imagination supplies numerous chilling possibilities for what was dislodged. soap and sometimes with an imaginary sumo wrestler and professional assassin named Kato, with whom. forbidding than this one, he knows that sprinting flat-out through such terrain in twenty-percent humidity. "I wouldn't know, but it wouldn't surprise me," Celia answered. "I just know the true story about Howard because. . . because." Elsewhere in the kitchen, a man screams. Maybe he's been shot. Curtis has never heard the cry made by. The inverted logic that had puzzled him had not been something peculiar to the military mind; it was just that the military mind was the only one he had ever really known. The inversions came from the whole insane system that the Military was just a part of the system that fought wars to protect peace and enslaved nations by liberating them; that turned hatred and revenge into the will of an all benevolent God and programmed its litanies into the minds of children; that burned and tortured its heretics while preaching forgiveness, and made a sin of love and a virtue of murder; and which brought lunatics to power by demanding requirements of office that no balanced mind could meet. A lot of things were becoming clearer now as the Chironians relentlessly pulled the curtain away. "They'll say he never existed, that I'm just disturbed and invented him, like an imaginary playmate." out of the booth and rose to his feet. "You wouldn't do something stupid like take the money and then not. plant food, in spite of the regular aeration of its roots and periodic treatment with measured doses of. "Go, go, go!" Curtis urges, because the night has grown strange, and is now a great black beast with a fiery glow of red neon. The boy sets off in that direction. "So why bother?" Jay asked. "What's it to you if somebody else's house needs painting or not?" "Tell it to Merrick," Fallows said, making an effort ~lot to show the disapproval that he felt. Talking that way betrayed a sloppy attitude toward engineering. Even if they had only three weeks to go, there would still be no excuse not to fix a piece of equipment that needed fixing. The risk of catastrophic failure might have been vanishingly small, but it was present. Good practice lay with reducing possibilities like that to zero. He considered himself a competent engineer, and that meant being meticulous. Walters had a habit of being lax about some things--small things, admittedly, but laxness was still laxness. To be ranked equally irked Fallows. "Log change of watch duty, Horace," he said to the grille on the

console. "Officer Fallows. Ahead, Old Yeller drops the sandal and turns right, between two slopped vehicles. Curtis follows. The "Army logic," Colman murmured. "That's one of my sisters playing the cello," Murphy informed him. (Was it? Oh, yes--the Chinese was Murphy.) Bernard looked over at the quartet. The cello. hours of punching babies and nuns, the pacifist said, "The congressman isn't unreasonable. By taking his lasers, slim grenades, handcuffs. Automatic pistols are holstered at their hips, but they arrive with more." Of course not, dear. It's just that the Chironians haven't been paying as much attention as they should to the things the computers tried to teach them. They've always had machines to give them everything they want, and they think. Sterm did not appear surprised. "They have merely to comply with the law to avoid such consequences," "Don't tarry, child!" the queen commanded. "Come hither at once and lay thine eyes upon this treasure. Drinking the melted ice in the plastic tumbler, she swore off the second double shot of vodka that earlier. Colman's face creased into a frown. "I was wondering what they want with all that stuff. Anyone would think it's about to run out." "Then you lose out to the system. It's like playing against Driscoll-the system makes it's own aces." As the guards started forward and the members continued to sit in paralyzed silence, Ramisson rose and walked haltingly to the center of the main aisle to face Sterm. "I will not submit to such intimidation," he said in a harsh whisper. "Remove your men from that door." With that he turned about and began walking stiffly toward the main doors at the rear. agrees with his assessment of the fundamental requirement of a boy-dog friendship. coming in." Then gunfire. Sterm nodded slowly as he ticked off the points one by one in his mind, looking at Stormbel coolly, then turned to Gaulitz, one of the senior scientists, who was sitting with some advisers to one side of the room. "Let us be certain about the Kuan-yin," he said. "The success of the entire operation is at stake. You are quite sure?" "Well done, Stanislaw," Sirocco said. "Let's hope that the repeat performance will be as good later today." Leilani pulled open the door. "I hope you're not expecting an answer," Hanlon said. "It makes about as much sense to me as Greek ...." He slowed then and inclined his head to indicate the direction across the street. "Now, there's the fella you should be asking," he suggested. Colman nodded. "Gone to the storeroom with Hanlon and Lechat. Everything was quiet upstairs when we left." "You do now." Merrick arched his fingers in front of his face. "Would you say that delinquency and criminal tendencies do, or do not, reflect the image we ought to be trying to maintain of the Service?" "It could be worse, I guess," the girl said with a calculated jauntiness. "He could be a bad dresser. A. The boy follows his spry companion into this tented blackness. "The facts aren't going to be changed, no matter how strongly you want to believe they're different, and no matter how many people you persuade to agree with you, are they? In the end Kalens rallied everybody to a consensus with a proposal to formally declare a Terran enclave within Canaveral City, delimited by a clear boundary inside which Terran law would be proclaimed and enforced. The Iberia proposal would require months, he told Lechat, whereas the immediate issue to be resolved was that of Terran security. In any case, it could hardly be carried out without an electoral mandate. The enclave would preserve intact a functioning and internally consistent community which could be transplanted at some later date if the electoral results so directed, and 'therefore represented as much of a step in the direction that Lechat was advocating as could be realistically expected for the time being. Lechat was forced to agree up to a point and felt himself obliged to go along. BY THE TIME that Leilani rose from the kitchen table to leave Geneva's trailer, she was ashamed of. ever-dwindling but not yet eradicated capacity for romanticism. Marie walked across the room end gazed at the large screen. "Does this work?" she asked. Forgetting to use the brace's mechanical knee joint, swinging her caged leg from the hip, Leilani hitched. "You seem surprised," Rastus said to Bernard. federal authorities have become aware of the dark forces that pursue this motherless boy, then they are. Adam seemed to think about it for

a long time. "No ..." he said slowly at last. "We're on our own on a grain of dust somewhere in a gas of galaxies. Inventing guardian angels for company won't change it. Whether we make it or not is up to us. If we mess it up, the universe out there won't miss us." He paused to study the expression on Colman's face, then went on, "It's not really so cold and lonely when you think about it. True, it means we have to get along without any supernatural big brothers to control Nature for us and solve our problems, but what are we losing if they don't exist anyway? On the other hand, we don't have to fear all the nonsense that gets invented along with them either. That means we're completely free to decide our own destiny and trust in our own reason. To me that's not such a bad feeling." Bernard looked at him suspiciously. "Just what are you up to now?" "SO you're happy you can handle it," Bernard said. Stern's face darkened, and his mouth twisted into an ugly grimace. His suave veneer seemed to peel away as his eyes widened, and for an instant, even from where he was sitting, Bernard found himself looking directly into the depths of a mind that was completely insane. He shivered involuntarily. Beside him Celia gripped his arm. "General," Stern ordered. "Launch the missile in sixty seconds." "If you win the wrong way, you lose, and if you lose either way, you lose. So why not enjoy it?" The motel and the diner lay out of sight to the east, beyond the ranks of parked vehicles, marked by the. "Not anymore," Micky said, surprised to hear herself reply at all, let alone so revealingly. "Yes, but that situation can't last. If the Army doesn't get them soon, the Chironians will." The shriek again: longer this time, tortured, shot through with fear and jagged with misery. Here, now, the hot August darkness. The moon. The stars and the mysteries beyond. No getaway train. Pernak had short, jet-black hair, a broad, solid frame, and rubbery features that always fascinated lay with their seemingly endless variety of expressions. He had lectured on physics topics several times at lay's school and had proved popular as much for his entertainment value as for 'his grasp of the subject matter, which he always managed to make exciting with tantalizing glimpses inside black holes, mind-bending accounts of the first few minutes of the universe, and fantastic speculation about living in twisted spacetimes with unusual geometries. On one occasion he had introduced Feynman diagrams, which represented particles as "world lines" traversing a two-dimensional domain, one axis representing space and the other time. Mathematically and theoretically a particle going forward in time was indistinguishable from its antiparticle going backward in time, and Pernak had offered the staggering conjecture that there might be just one electron in the entire universe--repeating itself over and over by going forward as an electron and backward as a positron. At least, Pernak had pointed out, it would explain why they all had exactly the same charge and mass, which was something that nobody had ever been able to come up with a better reason for. shame, unless you were a hopeless self-dramatizer who believed every head cold was the bubonic plague. After watching the macabre ritual for several minutes, he turned to study the red-bearded Chironian, who was standing impassively almost beside him. He appeared to be in his late twenties or early thirties, but his face had the lines of an older man and looked weathered and ruddy, even in the pale light of the floodlights. His eyes were light, bright, and alert, but they conveyed nothing of his thoughts. "How did it happen?" Colman murmured in a low voice, moving a pace nearer. As though it were the most natural thing to do, the girl picked up Micky's fresh can of Budweiser and. "I try," Geneva said, "but my mind spins around it till I feel like something inside my head's going to fly." "She's not in any condition to feed herself right now. When Jay called that morning Adam had told him to invite as many Terrans as he wanted. Jay reached Colman at the school that the Army was using as a temporary barracks in Canaveral City, but Colman started to explain that he had set the afternoon aside for other things--in fact he'd intended to find out more about Port Norday from the Chironian computers. However, he changed his plans when Jay mentioned that Kath would be there to see her grandchildren. After all, Colman reasoned, he couldn't have hoped for a better source of information on Port Norday than Kath. As Hanlon was off duty, Colman had invited him along too. shadows cast by the rig. PAUL LECHAT, ONE Of the two Congressional members representing the Maryland residential module on the Floor of Representatives, which formed a second house and counterbalanced the Directorate, had a reputation as a moderate on most of the issues debated in the last few years of the voyage. Although not a scientist, he was a keen advocate of scientific progress as the only means likely to alleviate the perennial troubles that had bedeviled mankind's history, and an admirer of scientific method, the proven efficacy of which, he felt, held greater potential for exploitation within his own profession than tradition had made customary. He attempted therefore always to define his terminology

clearly, to accumulate his facts objectively; to evaluate their implications impartially, and to test his evaluations unambiguously. He found as a consequence that he saw eye-to-eye with every lobbyist up to a point, empathized with every special-interest to a certain degree, sympathized with every minority to a limited extent, and agreed with every faction with some reservations. He was wary of rationalizings, cautious of extrapolatings, suspicious of generalizings, and 'skeptical at dogmatizings. He responded to reason and logic rather than passion and emotion, kept an open mind on controversies, based his opinions on the strictly relevant, and reconsidered them readily if confronted by new information. The result was that he had few friends in high places and no strong supporters.. "So Dr. Doom is a UFO nut," Micky pressed.. "Is she a friend of yours?" Kath inquired..
