

## SUSPICIOUS THREADS

Western medicine, which she despised. When she returned home, she would launch a campaign of. Adam excused himself from going out because he had some work to do, and Bobby and Susie had been looking forward to a musical comedy that was being given not far away that evening. Colman assumed that Kath would want to go with them, which would leave him flipping a coin over which show to see; but to his surprise she suggested a drink somewhere for the two of them instead. She explained, whispering, "Anyway, I've already seen it more times than I can count." So who was he to turn it down? Colman asked himself. But at the same time he couldn't avoid the sneaking feeling that it was all just a little bit strange.. "Twenty?". contention.. Finally, the congressman went to the door of the two-story craftsman-style house and rang the bell.. Karla giggled, said something indecipherable, and pulled Sharmer inside, closing the door behind them.. see the window-basher. The guy grinned and winked.. "You what?" Jean gasped, horrified.. "You're looking more like a mutant all the time." .poking through other people's underwear is definitely a sign that you are a pervert, and there seems to be. bribed, anyway. They aren't politicians, after all. If the National Security Agency also has operatives in. Inside the room, the captives looked around in surprise as muffled thuds sounded just outside the door. The steward who had just brought in the evening meal opened the door, and soldiers in battledress poured in. Wellesley gasped as he saw Lechat with them. "Paul!" he exclaimed. "Where have you been hiding? You're the only one they didn't pick up. What-". her second piece.. "You could be right, but that's long-term," Lechat replied. "I'm more worried about what might happen in the shorter term. I need help to do something about it." .As one, the customers exiting the building had been paralyzed in midflight by the arrival of this scowling. KATH STOPPED TALKING and leaned away to pour a drink from the carafe of wine on the night table by the bed, and Colman lay back in the softness of the pillows to gaze contentedly round the room while he savored a warm, pleasant feeling of relaxation that he had not known for some time. It was a cosy, cheerfully feminine room, with lots of coverlets and satiny drapes, fluffy rugs, pastel colon, and homey knickknacks arranged on the shelves and ledges. In many ways it reminded him of Veronica's apartment in the Baltimore module. On the wall opposite was a photograph of two laughing, roguish-looking boys of about twelve, whom despite their years he recognized easily as Casey and Adam, and scattered about were more pictures which he assumed were of the rest of Kath's family. The one in a frame on the vanity resembled Adam. though not Casey so much, and was of a dark-haired, bearded man of about Colman's age. It had to be Leon, he guessed, though he had felt it better not to ask, more because of the restraints of his own culture than from any fear of disturbing Kath. The painting of a twentieth-century New England farm scene-given to her by one of her friends, Kath had said when he remarked on it-interested him. Since arriving on Chiron he had seen many such reminders of ways of life on Earth that nobody from Chiron had known. On asking about them, he had learned that a feeling of nostalgia for the planet that held their origins, known only second-hand via machines, was far from uncommon among the Chironians.. " ? but a bunch of hooley that maybe has a second and more serious purpose," Micky suggested.. "Often enough that it seems like always." . "Half of me," Leilani conceded, "might turn heads one day, but that's balanced by the fact that I'm a remarkable. The crudeness of what she heard lulled to fire a blush in her. If she harbored anger, she hid it." Thanks. They must be real. Even the best implants don't look that natural. Unless there's major. Drawing upon the messy experience of giving the dog a drink from a bottle of water in the Explorer, he. "I never realized," Geneva said miserably. "Never. I never suspected." . One of the figures was a bearded, dark-haired man whom Colman recognized as Leon, sitting alongside a brown skinned woman identified by the caption at the bottom of the picture simply as Thelma. So at least some of them were located at the arctic scientific establishment in northern Selene, Colman thought to himself. The other pair of figures were Otto, of Asiatic appearance, and Chester, who was black; the ones shown alone in the remaining two sections of the screen were Gracie, another Oriental, and Smithy, a blond Caucasian with a large moustache and long sideburns. From their ages they were all evidently Founder. Kath introduced each of them in turn without mentioning titles, responsibilities, or where any of them were, and the Terrans didn't ask.. "If she was dumb enough not to, she wouldn't have been there in the first place," Juanita added, trying to be helpful.. Adam waved an arm resignedly. "Okay, okay. Never mind the sackcloth-and-ashes act. How about cleaning it up?" . were the same people who had driven him out of the mountains and west through Grand Junction. He has. sliding doors. He draws a deep breath, clenches his teeth, and opens the closet.. shoulders length auburn hair was tied back in a ponytail, and she was wearing tan slacks with an orange silk blouse covering firm, full breasts. She looked up as Howard came out of the home. Her expression did not change. Their relationship was, and for all practical purposes always had been, a social symbiosis based on an adult recognition of the realities of life and its expectations, uncomplicated by any excess of the romantic illusions that the lower echelons clung to in the way that was encouraged for stability, security, and the necessity for controlled procreation. Unfortunately, the masses were needed to support and defend the structure. Machines had more-desirable qualities in that they applied themselves diligently to their tasks without making demands, but misguided idealists had an unfortunate habit of exploiting technology to eliminate the labor that kept people busy and out of mischief. Too, the idealists would teach them how to think. That had been the delusion of the twentieth century; 2021 had been the consequence.. he now tied in a hangman's knot. "What answer?" he asked, recalling the Circle of Friends thug with the. potential wound.. was an apothecary with a deep supply of this prescription.. restaurant kitchen.. "Well-of course." . He stared up at her, searching for a reply and finding none. In addition to her kindness, he had become. Bernard was nodding but with evident reservations. "True," he agreed. "But it's up in the ship, not down here. And it must be strongly protected. It's a vicious circle- you'd have to get in there to turn the Army around, but they're going to be outside and

stopping your getting in until you've done it. How can you break out of it?" "They destroyed all the pictures of him. Because when he comes back with the aliens, he'll be completely steel and railroad ties, automobile transports, slat-sided trailers carrying livestock, tankers full of gasoline, self-possession and faraway music. "How are you this evening, Mr. Farrel?" The mathematical indicators pointed to an earlier domain inhabited by a "fluid" of pure "tweedlestuff," of indeterminate size and peculiar properties, since space and time were bound together as a composite dimension which permitted no processes analogous to anything describable in familiar physical terms. There were grounds for supposing that if an expanding nodule of disentangled space and time were introduced arbitrarily through some mechanism—pictured by some people as a bubble appearing in soda water, although this wasn't really accurate—the reduced "pressure" inside the bubble would trigger the condensation of raw tweedlestuff out of "tweedlespace" as an explosion of tweedles and antitweedles, the tweedles preserving the "timelike" aspect, and the antitweedles the "antitimelike" aspect of the timeless domain from which they originated. Their mutual affinity would precipitate their combination into a dense photon fluid in which timelessness became reestablished, which tied in with Relativity by explaining why time stood still, for moving photons and accounting for the strange connection in the perceived universe between the rate at which time flowed and the speed of light. The high-energy conditions of the Primordial photon fluid, the density of which would have approximated that of the atomic nucleus, would favor the formation of "tweeplet" entities to give rise to matter interacting under conditions dominated by the strong nuclear force, which manifested itself to restore nonAbelian gauge symmetry with respect to the variance introduced by the separation of space and time. After that, the evolution of the universe followed according to well understood principles. "I don't even know what a paramecium is." "Aha!" The preacher made an appealing gesture to the audience. "Is there any difference, my friends? Can we see atoms? Is this not arrogant insolence?" He looked back at the boy and jabbed an accusing finger at him. "Do you claim to have seen atoms? Tell us that you have, and I will say that you lie!" Another appealing flourish. "And is this therefore not faith any the less, and yet this person proclaimed to have no need of faith. Does he not, therefore, contradict himself before us?" peach juice from a handful of dried pits would be easier than squeezing one drop of pity from this hunter's. He puts one eye to the inch-wide gap and studies the bathroom beyond, which separates the bedroom. "No, Curtis. I just think you're too sweet for this world." "I didn't know you had a thing about little girls, Steve," Anita teased. "You don't look the type." Hanlon roared and slapped his thigh. "So everyone becomes a law unto himself," Merrick concluded, hope other than his wits and courage. The boy hasn't previously given much thought to the gender of the dog. Stupid, stupid, stupid. "And I am on early duty tomorrow," Colman said. He grinned again, and she smiled back impishly, "So why are we still here?" they asked together. as she stumped toward the foot of the bed. though he recognizes the need for stealth, and stares beseechingly at his master. The features behind the other's visor remained unsmiling. "Mister Fallows to you, Sergeant." The voice was icy. "I'm sorry, but I have work to do. I presume you have as, well. Might I suggest that we both get on with it." With that he clasped the handrails of the ladder, stepped backward off the platform. to slide gently down to the level below, and turned away to rejoin the others. bride. "Not you," she disagreed, as though she knew him well. "Anger's more like it." "I've kept copies in case anything happens to yours." Colman looked unconsciously toward Kath for her opinion. "But how can you be so sure?" The dog goes straight for the shorts. No bark, no growl, no warning, in fact no evident animosity: Almost. Escape-with-canine isn't a feat that can be accomplished in a flash, while the startled owners stand gaping. appealing talk of a miraculous moment of transformation, nothing had happened to pivot Micky toward hope. "So your stepfather's a murderer." Driscoll met her eyes calmly. "I'd risk it," he said. "Sure, if this was for real, I'd put money on it." Curtis Hammond is a source of bitter envy, not because he has found peace in sleep, but because he is. won't draw the man's attention as much as will the movement of the door closing. two words carried a heavier load than any of the freight trains that Micky had imagined escaping on. brush and bramble ahead. "And so smart," Aunt Gen said proudly, as if the girl were her daughter. "Micky, did you know she's got. but a few of them freeze at the sight of the runaway semi, riveted by the impending disaster. "I'm not a cripple." pseudofather? bastard. Mom drew the type . . . not all of them, but more than one . . . and they could always smell the. "Not worth screwing around with," Walters declared. "With three months to go we might ~just as well cut in the backup and to hell with it. Fix the thing after we get there, when the main drive's not running. Why lose pounds sweating in trog-suits?" "People don't worry about being replaced by a chip?" eventually be her salvation. Or damnation. "Aren't the boarding gates being checked?" Colman murmured, surprised. A few seconds later Lurch, the household robot—apparently an indispensable part of any environment on Chiron that included children—appeared in the doorway. "It slipped," it announced. "Sorry about that, boss. I've wired off an order for a replacement." "I'll trade," Stanislaw offered at once. Maybe dogs aren't capable of feeling humiliated. The boy's never had a dog before. He knows their. "Everything I've said is true," Jay insisted. "There's this big kinds market in town. It's got just about everything, and you just walk in and take what you want. We got talking to some Chironians, and they showed us what you do. I don't understand it either, but that's how things work here." "Being naive is no damn excuse." Geneva trembled. She lowered her hands from her face, wringing them. After watching the macabre ritual for several minutes, he turned to study the red-bearded Chironian, who was standing impassively almost beside him. He appeared to be in his late twenties or early thirties, but his face had the lines of an older man and looked weathered and ruddy, even in the pale light of the floodlights. His eyes were light, bright, and alert, but they conveyed nothing of his thoughts. "How did it happen?" Colman murmured in a low voice, moving a pace nearer. "Does Casey know?" Colman asked. Veronica shook her head. Colman thought for a few seconds. "I don't like the sound of what's going on around there," he said. "Do you know the bridge outside, the base on the south side—where the maglev tube crosses a small gully by the distribution substation?" and she laughed with strange delight. got my

orders." "So have I." "That's different." "How?".massive Indian laurels, and though it wasn't shaded by the trees, it was sixty or eighty feet from the."We-we never believed that story," Bernard said weakly..silence left by Micky's hesitation: "As long back as I can remember, old Preston has touched me only.on remembering it, keeping the details sharp, especially his smile. I'm never going to let his face fade.COLMAN LEFT THE Fallows house shortly before midnight with Bernard. Lechat, and Celia. There were more people about in Phoenix than he had anticipated, and the pasty reached the post that Sirocco had specified without need for elaborate precautions.."On the other hand, if you mean who's in charge of assigning the equipment up here and keeping track of who's scheduled to do what and when, then that would be Cromwell," Carla said. "He's linked into the ship's main computers and through them to the planetary net."..her shame hadn't arisen from her rudeness regarding Micky's drinking any more than it had been caused.above her, in the open doorway, and even in this poor light, Leilani could see that they both still looked.A short silence fell, and the deadlock persisted. Then Marcia Quarrey turned from the window, where she had been staring down over the Columbia District. "I thought you said earlier that there was a provision for ensuring the continuity of extraordinary powers where security considerations require it," she said, frowning.."I don't know," was all that Bernard could reply. "If they have, they haven't published it. But does it seem likely? Would Sterm be moving the way he is if they had? But you have nothing to lose by spelling it out to them. It has to be worth a try."..Colman had reached the place where a raised catwalk joined the gallery from a door leading through a bulkhead into one of the booster-pump compartments, where tritium bred in the stem bypass reactors was concentrated to enrich the main-drive fusion plasma before it was hurled away into space. With little more than the sound of sustained, distant thunder penetrating through to the inside of. his helmet, it was difficult to imagine the scale of the gargantuan power being unleashed on the far side of the reaction dish not all that far from where he was standing. But he could feel rather than hear the insistent, pounding roar, through the soles of his boots on the steel mesh flooring and through the palm of his gauntlet as he rested it on the guardrail overlooking the machinery bay below the catwalk. As always, something stirred deep inside him as the nerves of his body reached out and sensed the energy surging around him--raw, wild, savage energy that was being checked, tamed, and made obedient to the touch of a fingertip upon a button. He gazed along the lines of super conducting bus bars with core maintained within mere tens of degrees from absolute zero just feet from hundred million-degree plasmas, at the accelerator casing above his head, where pieces of atoms flashed at almost the speed of light along paths controlled to within millionths of an inch, at the bundles of data cables. marching away to carry details of everything that happened from microsecond to microsecond to the ever-alert control computers, and had to remind himself that it had all been constructed by men. For it seemed at times as if this were a world conceived and created by machines, for machines--a realm in which Man-had no place and no longer belonged..compassion and fairness that were the costume of preference among politicians, but he was still reliably a.Bernard shook his head. "No. We're in touch with them but Wellesley vetoed any mention of it." Colman nodded. He wouldn't have risked their deciding to fire first either. Bernard went on, "Wellesley's tried contacting the Battle Module too, but Sterm won't talk. We sure he'll keep the module attached until after the attack goes in-in other words if he doesn't pull it off and gets blasted, we all get blasted. The same thing applies if the Chironians decide to press the button. We have to assume he's on a forty-minute countdown, Hanlon and Annley are on their way there, and Sirocco left a few minutes ago. Borftein is sending through everybody he can scrape together. What are the chances?"..sand, across loose shale, between masses of sage and weather-sculpted thrusts of rock, zigging and."Was it ever like this? I certainly don't remember."..extraterrestrials."..Curtis hopes that he won't have to kick anyone in the sex organs, but he's prepared to do whatever is.into hiding. They huddle together, turning their heads to watch the passing boots, and the boy is oddly."Wait a minute, wait a minute," Bernard interrupted, raising a hand in alarm. "Just what the hell is this? What's a das?--". "Photographs," Micky said. "Pictures of you and Luki. That would be proof he wasn't just your.legs, baring his underwear. He kicks at her, but the shorts trammel him; he fails to land a foot in fur,.at the pump islands is a far away grumble. Muffled country music, oscillating between faint and fainter,..and bitter, him havin' a hissy fit, him broodin' up bad snaky revenge."..the conviction that change was coming and that it would be a change for the better.."Good enough?" Sirocco asked, cocking an eyebrow at Lechat.."Of course not! But one of the Tech grades maybe . . . Two or Three perhaps. Or maybe the graduate entry stream." -."Her mother's dying too," Jay had replied dryly. Colman got Adam talking about his work and about the physical and biological environment of the planet generally. Chiron was practically the same age as Earth, Adam said, having been formed along with its parent star by the same shockwave that had precipitated the condensation from interstellar gas clouds of the Sun and its neighbors. It."Sinsemilla? That's a ..."..gazing out across the enormous kitchen, wide-eyed, watching the hunters. The white-uniformed cook.straw-riddled manure..In the main ground-floor hall, past the nurses' station, Noah encountered Richard Velnod. Richard
