

TURE OF COURTS LEET AND COURTS BARON FIFTHLY THE POWER AND AUTHORITY

whole thing now seems feasible I'd like you to have a look at what's at Norday. You should take Hoskins with you. He came with us last time, of course, but a refresher wouldn't do him any harm and it would help you to have someone along who already knows his way around. That was really what I wanted to talk to you about." Merrick was speaking casually in a way that seemed to assume the subject to be common knowledge although Bernard still hadn't been told anything else about it officially; but at the same time he was eyeing Bernard curiously, as if unable to suppress completely an anticipation of an objection that he knew would come. "I bet she does," Stanislaw maintained. "They all do..THE COFFEE HAD SIMMERED long enough to turn slightly bitter. By the time she sampled her third.Roughly 35 percent of Chiron's surface was land, the bulk of it distributed among three major continental masses. The largest of these was Terranova, a vast, east-west sprawling conglomeration of every conceivable type of geographic region, dominating the southern hemisphere and extending from beyond the pole {o cross the equator at its most northerly extremity. Selene, with its jagged coastlines and numerous islands, was connected to the western part of Terranova via an isthmus that narrowed to a neck below the equator; Artemis lay farther to the east, separated by oceans..In fact, he has no idea where he's going. Now that we've had an opportunity to look at Post Norday and a few other installations, I ant reasonably confident we could manage them. I didn't want to take up too much of everybody's time before, but since the."Okay, maybe not." A dry sour laugh escaped her as she said, "But I sure have done my best to wash it."Been having a nice chat, have you?" Sirocco asked. "Well, yes, actually, I suppose, sir. How did you know?" Sirocco waved at the corridor behind him. "Because it's happening everywhere else, that's how. Carson's talking football, and Maddock is telling some kids about what it was like growing up on the Mayflower II." He sighed but didn't sound too ruffled about it. "If you can't beat 'era, then join 'era, eh, Driscoll... for an hour or so, anyway. And besides, they want to show Colman something in the observatory upstairs. I don't understand what the hell they're talking about..".Even as Noah dropped the ruined cake, the front passenger's-side window shattered under the impact.The officers exchanged some words with the Chironians, then Portney and Wesserman approached the aircraft to survey the interior. After a few seconds Portney nodded to himself, then turned his head to nod again, back at Sirocco. Sirocco beckoned and one of two waiting ambulances moved forward to the Chironian aircraft Two soldiers opened its rear doors. Four others climbed inside the aircraft and began? moving bodies. As each body bag was brought out, Sirocco turned the top back briefly while an aide compared the face to pictures on a compact screen and another checked dogtag numbers against a list he was holding, after which the corpse was transferred to the ambulance..They departed less than five minutes later, leaving Carson and one of the other soldiers inside with the prisoners and two guards standing stiffly outside the door with

everything in the corridor seeming normal. Hanlon took Wellesley, Borftein, and Lechat to a storeroom near the Communications Center where they could remain out of sight. Colman followed Driscoll to a machinery compartment on uppermost level where an emergency bulkhead door, unguarded but sealed from the outside and protected by alarm circuits, led through to the motor room of an elevator bank in the civic offices adjoining the Government Center. Colman traced, checked, and neutralized the alarms. Then he double-checked what he had done, and nodded to Driscoll, who was waiting by the door; Driscoll opened the latches and swung the door outward while Colman held his breath. The alarms remained inactive. Sirocco was waiting on the other side with Bernard Fallows, who was wearing engineer's coveralls and carrying a toolbox. Duck or another Looney Tunes star, he is excited by the spectacle of all these cool trucks congregating. Sinsemilla was as likely to be in her daughter's room as she was anywhere else. She had no respect for. "Very smoothly, considering that it's been twenty years." Bernard permitted a faint smile. "Jean's finding some things a bit strange, but I'm sure she'll get over it." "sure it wasn't a Martha Stewart recipe." Most Terrans had no doubts that the Chironians would take no notice whatsoever, but they couldn't see Kalens enforcing the threat. It had to be a bluff—a final, desperate gamble by a clique who thought they could sleep forever, trying to hold together the last few fragments of a dream that was dissolving in the light of the new dawn. "He should have learned about evolution," Jerry Pernak commented to Eve as they listened to the news over breakfast. "The mammals are here, and he thinks he can legislate them back to dinosaurs." and had to endure her verbal battering? sometimes for hours? until she wound down or went away to. "Oh." Jay set the painting down by the wall and frowned at it as if he had just noticed it for the first time. "I thought that might look nice in my room." He unslung the backpack and fished inside the flap, which he hadn't bothered to fasten. "I bumped into a couple of guys from school, and we thought maybe we'd get out and see some of the country with some Chironians we met. There's a lot more of it around here than inside the GC module. So I got these." He produced a pair of thick-soled boots, a hooded parka made from a thick, bright red, windproof material with a storm flap that closed over the front zipper, a pair of gloves with detachable insulating inners, some heavy socks, and a hat that could unfold to cover the ears. "We were thinking of going to the mountains across the sea," he explained. "You can get there in a flyer from Franklin in about twenty minutes." had been tossed and tangled by the moon dance, she might pass for a queen. "Got any better ideas?" For once Swyley didn't. Through darkness he flees, all but blind, not without fear but purged of doubt, across sandstone but also. "How do you know?" Jean challenged. "You weren't there. And that's not the way it sounded when Kalens was talking just now. And a lot of people seemed to agree with him." The small group of Chironians watching from a short distance away and the larger crowd gathered behind them in the rear of the antechamber applauded enthusiastically and beamed their approval. They weren't supposed to do that. It didn't preserve the fight atmosphere. make the swap. Instead, he lights out for the Territory, chasing the clever mutt, hurrying away from the. With two types of component or anticomponent to choose from for each triplet, a triplet could comprise either three of a kind of one type, or two of one kind plus one of the other. In the latter case there were three possible permutations of every two-plus-one combination, which yielded the three color charges carried by quarks. The three-of-a-kind combinations could be arranged in only one way and corresponded to leptons, which was why leptons could not carry a color charge and did not react to the strong nuclear force. "Do him good too," Sirocco declared. "Then they might make him an engineer. But you'll have a hard time. "More like a few days," Leilani said. "We just spent July in Roswell, actually, because it was July 1947. Noah stopped, dismayed. "Which one?" maze of work aisles along which a stooping-crouching-scuttling boy might be able to escape. Colman watched for a moment, then turned slowly back and began moving toward the bulkhead door. He didn't feel resentful, nor particularly surprised. He'd seen it all too many times before. Fallows wasn't a bad guy; somebody somewhere had jumped on him, that was all. "He might know all about how machines

work," Colman murmured half-aloud to himself as he returned to the gallery outside the Bomb Factory. "But he doesn't understand how they think." Leilani appeared to be surprised. "Don't you read newspapers?" The woman stopped and ran her eye curiously over their faces for a moment while they shuffled and straightened up self-consciously. "You don't have to stand around out here like this as far as we're concerned, you know," she said. "You can come on inside if you want. How about a coffee, and maybe something to eat?" The faces turned instinctively toward Colman as he rejoined them..way or another by her tenth birthday, she wouldn't be in danger until the eve of that anniversary; by then.,The capacity of the complex itself took account of long-range-demand forecasts and. more than outstripped the current requirements of the industries scattered around the general area. Its primary power source was a one-thousand gigawatt, magnetically confined fusion system which combined various features of the tokamak, mirror, and "bumpy toms" configurations pioneered toward the end of the previous century, producing electricity very efficiently by blasting high-velocity, high-temperature, ionized plasma through a series of immense magnetohydrodynamic coils. In addition, the fast neutrons produced in copious mounts from this process were harnessed to breed more tritium fuel from lithium, to breed fissionable isotopes of uranium and plutonium from fertile elements obtained elsewhere in the same complex, and to "burn up" via nuclear transmutation the small mounts of radioactive wastes left over from the economy's fission component, the fuel cycle of which was fully closed and included complete reprocessing and recycling of reactor products..Jay glanced at Colman, then looked at Bernard. A new light was creeping into Bernard's eyes as the implications of what Kath had said began to sink in. Jay hesitated, then decided that his father was in the fight mood. "You know, this is a bit of a risky place, Dad," he said in an ominous voice. "People getting shot all over the place and stuff like that. I could run into all kinds of trouble on my own. I'm sure you'd feel a lot happier ff I had some professional protection." Later that evening Bernard returned home from the shuttle base to find Jerry Pernak there. Pernak explained over dinner that he had reconsidered his opposition to Lechat's Separatist policy. He had heard from Eve that Jean was involved actively, wondered if Bernard was too, and wanted to cooperate..Coming in, he'd known the risks. What he hadn't realized, until now, was that the motor home has no."Well, try not to make it half the night this time, won't you." And to Pernak: "Take care, Jerry. Thanks for dropping by. Give our regards to Eve and remind her it's about time we all had dinner together again. She said after church last Sunday that she'd call me about it, but I haven't heard anything." "Then you don't know how to look yet, honey. There's a dish of pickles, some olives, a bowl of potato." "I'll remind her," Pernak promised. "Ready, lay? Let's go." The mention of antimatter reminded Colman of something. He sat back on the sofa and cast his mind back as he tried to pinpoint what. It reminded him of something Kath had said. The others stopped talking and looked at him curiously. And then it came to him. He cocked his head to one side and looked at Bernard. "Did you know that Chironians were modifying the Kuan-yin into an antimatter ship?" he asked..Jay sighed again. "I guess not. Let's go.
