Loony.,about his stowaways..In the Political Science course at school, the Mayflower II's primary mission had been described as one of "preemptive liberation," which meant that because the Asiatics and the Europeans were the way they were, they would seize Chiron and convert it to their own corrupt ways if given the chance, and the Mayflower II therefore had two years to teach the Chironians how to protect themselves. There were other, more abstract reasons why it was so important for thee Chironians to be educated and enlightened, which Jay didn't fully understand, but which he accepted as being among the many mysteries that would doubtless reveal themselves in their own good time as part of the complicated business of growing up..The SD sergeant half rose from his seat. "Sir, I didn't-I thought-". "You must hold out to the last man," Colonel Oordsen, who was following events from the Bridge, said on one of the control room screens. Can there be such things?.By the time the flyer touched down at the front of the house, Celia's earlier nervousness had given way to a stoic resignation to the fact that she was now committed. She had gambled that Stern would accept her desire to return to her home as normal feminine behavior and that because he believed her to be helpless and without anyone else to run to anyway, the thought of her trying to escape would not enter his mind seriously. That - was just how it had worked out; her three SD guards and a matron had orders to keep her under observation and from talking to anybody, but she was not considered to be a prisoner. Bret Hanlon held up a hand protectively. It was a pinkish, meaty hand with a thin mat of golden hair on the back, the kind that looked as if it could crush coconuts, and matched the solid, stocky build, ruddy complexion, and piercing blue eyes that came with his Irish ancestry. "Don't look at me," he said. "I'm contracted now, all nice and respectable. That's the fella you should be making eyes at." Pernak tossed up his hands. "I've been to take a look at their university and what they do there. You wouldn't believe it. And I've already got a position if I want it, for no other reason than that people already there say it's okay. You get a house, for nothing . . . a good one. Or they'd build you one however you want it. How can you say no? We're going to become Chironians. And so will everybody else when they've gotten over the voyage. Then people like Kalens can yell all they want, but what can they do if there's nobody left to take any notice? It's as I said-you have to start thinking like Chironians." . Meanwhile, Leilani did the best that she could with the skills she had and with the materials at her. decides to search for a bowl or for something that can serve as one.. after the dog. Being Curtis Hammond, he isn't designed for speed as well as Old Yeller is, but she. Hanlon detached himself from a group and sauntered over to Colman, Celia, and Lechat. Things had been so hectic that an opportunity for a few quick words with them had not presented itself since Colman's return. "Well, I see there's no need to ask how things went on your side, Steve. I take it that Veronica's in safe hands now." . the most devout priest was serious about his faith.. "Exactly, Jay. What you have is an ascending hierarchy of increasing levels of complexity. At each level, new relationships and meanings emerge that are functions of the level itself and don't exist at all in the levels beneath. For instance, there are twenty-six letters in the alphabet. One letter doesn't carry a lot of information, but when you string them together into words, the number of things you can describe fills a dictionary. When you assemble words into sentences, sentences into paragraphs, and so on up to a book, the variety is as good as \_ infinite, and you can convey any meaning you want. Yet all the books ever written in English only use the same twenty-six letters." . Chiron's surface had been formed through the same kind of tectonic processes as had shaped Earth's, and Chironian scientists had reconstructed most of its history of continental movements, mountain-building, sedimentation, vulcanism, and erosion. Like Earth, it possessed a magnetic field which reversed itself periodically and which had written a coherent story onto the moving seafloors as they spread outward and cooled from uplifts along oceanic ridges; the complicated tidal cycle induced by Chiron's twin satellites had been unraveled to yield the story of previous epochs of periodic inundation by the oceans; and analysis of the planet's seismic patterns had mapped its network of active transform faults and subduction zones, along which most of its volcanoes and earthquake belts were located.. Bernard nodded and seemed relieved, but his expression was still far from happy as he turned toward Kath, who had moved away from the others, and was watching curiously. Bernard seemed to want to say something that he didn't know how to begin.. with a patina of perspiration. In spite of her genius IQ, her street smarts, and her well-polished wise-ass. The soft knock wasn't opportunity, but Micky said, "Come in." . Three obstacles now remained between Kalens and the vision that he had nurtured through the. years of presiding over the kind of neofeudal order that would epitomize his ideal social model. First there was the need to ensure his election to succeed Wellesley; but Lewis was coordinating an effective media campaign, the polls were showing an excellent image, and Kalens was reasonably confident on that score. Second was the question of the Chironians. Although he would have preferred Borftein's direct, no nonsense approach, Kalens was forced to concede that after six years of Wellesley's moderation, public opinion aboard the Mayflower II would demand the adoption of a more diplomatic tack at the outset. If diplomacy succeeded and the Chironians integrated themselves smoothly, then all would be well. If not, then the Mission's military capabilities would provide the deciding issue, either through threat or an escalated series of demonstrations; opinions could be shaped to provide the justification as necessary. Kalens didn't believe a Chironian defense capability existed to any degree worth talking about, but the suggestion had potential propaganda value. So although the precise means remained unclear, he was confident that he could handle the Chironians. Third was the question of the Eastern Asiatic Federation mission due to arrive in two years' time. , With the first two issues resolved, the material and industrial resources of a whole planet at his disposal, and a projected adult population of fifty thousand to provide recruits, he had no doubt that the Asiatics could be dealt with, and likewise the Europeans following a year later. And then he would be free to sever Chiron's ties to Earth completely. He hadn't confided that, part of the dream to anyone, not even Celia,.. For once, no sparkle of humor enlivened Leilani's blue eyes, no thinnest paring of a wry smile curled. "You don't have problems when fanatics start getting together with causes worth dying for?" Jay asked.. "The dead singer?" whole army behind me, what can a rabble of ruffians with handguns do to stop me now?" her brain. Micky was better than that. Yeah, sure, all right, Micky did indeed harbor the tendency to. The other two followed his gaze to a Chironian wearing coveralls and a green hat with a red feather in it, painting the lower part of a wall of one of the houses. Near him was a machine on legs, a clutter of containers, valves, and tubes at one end, bristling with drills, saws, and miscellaneous attachments at the other. A ground vehicle with a multisectioned extensible arm supporting a work platform was parked in front; and from a few yards to one side of the painter, a paint-smeared robot, looking very much like an inexperienced apprentice, watched him studiously. The Chironian was as old as any that Colman had seen, with a brown, weathered face, but what intrigued Colman even more was the house itself, which was built after the pattern of dwellings on Earth a hundred years earlier--constructed from real wood, and coated with paint. It was not the first such anachronism that he had seen in Franklin, where designs three centuries old coexisted quite happily alongside maglev cars and genetically modified plants, but he hadn't had an opportunity to stop and study one before. Squinching her face, Leilani said, "I bet it pulls up its roots late at night and creeps around the mother anywhere." At least the Chironians were not acting standoffish, which eased the monotony. An hour or two earlier, Colman himself had enjoyed a long conversation with a couple of fusion engineers from the complex, who, to his surprise, had seemed happy to answer his questions about it. They had even offered him a quick tour. He found that strange, not because of the Chironians' readiness to accommodate anybody regardless of rank or station--he was getting used to that by now--but because he had no doubt at all that they had been as aware of the demands of military discipline as he. Yet they had deliberately acted as if they knew less than they did, even though they were far too smart to believe that he'd be taken in. The Chironians did it all the time. The man at Canaveral base had practically offered Sirocco a place with a geographical survey team even though he knew that Sirocco was in no position to accept. The more Colman thought about it, the more convinced he became that the Chironians' actions couldn't all be just a coincidence. what Lani girl gonna taste like." She continued to hold Noah's gaze as she said, "Well, if you ever get divorced, you know where I. Although Casey and Barbara remained outwardly cordial and polite, they were making no attempt to disguise the fact that they felt the same way. Colman realized that for the first time he was seeing Chironians with the gloves off. All the warmth, exuberance, and tolerance that had gone before had been genuine enough, but beneath it all lay more deeply cherished values which came first, no matter who made the pleas. On that, there could be no concessions. the true cause of it. away with the spring of pride in her step. Leilani's hard-pounding heart seemed to clunk as arrhythmically and as awkwardly as a panicked girl. Colman stared at Celia for a few seconds longer. He still didn't know why Celia should have been so anxious to get away from Stern or why she should have been in any danger. Life couldn't have been much fun with somebody like Howard, he could see, so the thought of her gravitating toward a strong, protective figure like Stern wasn't so strange. And it didn't seem so unnatural that she should have stayed near Stern after Howard was killed. In such circumstances it would have been normal to provide her with an escort down to the surface too, for her own security; but having her watched all the time and not allowing. The family robot, which hadn't been able to manage the crate either, perched itself on the tailgate and sat swinging its legs while the soldiers escorted the Chironians to the ground car behind, where two younger children and their mother waited. A sharp rat-tat-tat sounded from the house behind as Sirocco nailed up a notice declaring it to be confiscated and now government property. A crowd of thirty or more Terrans, mostly youths, looked on sullenly from across the street, watched by an impassive but alert line of SDs in riot gear. This time the Terran resentment was not being directed against the Chironians. drove a rustbucket, never traveled, and bought his clothes at warehouse-clubs. Providing for Laura was. "Maybe I wanted him to find out-provoked him to it. You see, after all that time, maybe I knew deep down that I couldn't just walk away and leave him like that either.' What other way was there?"
