He spent most of August, when he should have been on vacation, trying various methods of detecting sound through the device. By focusing on the interior of a speaker's larynx and using infrared, he was able to convert the visible vibrations of the vocal cords into sound of fair quality, but that did not satisfy him. He worked for a while on vibrations picked up from panes of glass in windows and on framed pictures, and he experimented briefly with the diaphragms in speaker systems, intercoms and telephones. He kept on into October without stopping and finally achieved a system that would give tinny but recognizable sound from any vibrating surface?a wall, a floor, even the speaker's own cheek or forehead.."Very well," said Amos a second time. Fifty years from now our understanding of controlled-fusion processes will probably have eliminated that source of shortages too, but in the meantime shorter sighted political considerations are recreating the climate of tension and rivalry that hinged around the oil issue at the close of the last century. Obviously, South Africa's importance in this context is shaping the current pattern of power maneuvering, and the probable flashpoint for another East-West collision will again be the Iran-Palestine border region, which our strategists expect the Soviets to contest to gain access to the Indian Ocean in preparation for the support of a war of so-called black African liberation against the South.".glass..Mama Dolores put her hand to her mouth.
