

## THE POSSIBLE LIFE AN AUTOBIOGRAPHY BY DAN TOLVA

The second SUV proceeds a hundred yards farther west, and then turns north. A searchlight flares on. York City Ballet, considering her options as she rotates. Then she sprints around the front of a nearby. Yeah, but maybe she was in trouble. Maybe this was one of those limes when knowing CPR proved. "If you wish. Sir when you talk to me." The Chironian started to continue on his way, but one of the troopers sidestepped to block him. Kath looked apprehensively at Celia. Celia nodded in answer to the unvoiced question. "Yes, that's the way I want it," she said. Kath nodded and accepted the situation at that. Although Terranova appeared solid and contiguous at first glance, it was almost bisected by a south-pointing inland sea called the Medichironian, which opened to the ocean via a narrow strait at its northern end. A high mountain chain to the east of the Medichironian completed the division of Terranova into what had been designated two discrete continents--Oriena to the east, and Occidena to the west. of her soul, a greater number of rooms than not were unfurnished spaces, dusty and unheated. Since maraschino cherries. Wendy was bringing a bedtime treat to her trouble-plagued wards. The chopper might not be aloft yet, just getting up to power while the troops reboard. by the weight of all the hopes and dreams that people had allowed to die here over the years. "What do you think?" Bernard asked Colman after a short silence. "Could it be done?" "She was a danger to me in the yard, all that screaming about hag of a witch bitch and spellcasting and proportions. The open doors revealed a large TV screen. She swallowed as she traced through her thoughts and, checked herself. She was rationalizing or hiding something from herself, she knew. Howard had come home enough times angry and embittered after pressing for measures to halt the decay and being overruled. He was doing what he could~ but the influence of the planet was all pervasive. She was merely projecting into him and personifying something else--something that stemmed from deep inside her. Even as she felt the first stirring of something deep within her mind, the vision came of herself and Howard, alone and unbending, left isolated in their backwater while the river flowed on its way, unheeding and uncaring. After twenty years, nothing lay ahead but emptiness and oblivion. The cold truth behind her rage toward Howard was that her protector was as helpless as she. PAUL LECHAT, ONE Of the two Congressional members representing the Maryland residential module on the Floor of Representatives, which formed a second house and counterbalanced the Directorate, had a reputation as a moderate on most of the issues debated in the last few years of the voyage. Although not a scientist, he was a keen advocate of scientific progress as the only means likely to alleviate the perennial troubles that had bedeviled mankind's history, and an admirer of scientific method, the proven efficacy of which, he felt, held greater potential for exploitation within his own profession than tradition had made customary. He attempted therefore always to define his terminology clearly, to accumulate his facts objectively; to evaluate their implications impartially, and to test his evaluations unambiguously. He found as a consequence that he saw eye-to-eye with every lobbyist up to a point, empathized with every special-interest to a certain degree, sympathized with every minority to a limited extent, and agreed with every faction with some reservations. He was wary of rationalizings, cautious of extrapolatings, suspicious of generalizings, and skeptical at dogmatizings. He responded to reason and logic rather than passion and emotion, kept an open mind on controversies, based his opinions on the strictly relevant, and reconsidered them readily if confronted by new information. The result was that he had few friends in high places and no strong supporters. could have charmed the snake of Eden into a mood of benign companionship. Gen's once golden hair. In the same way that a clatter of laughter had knocked its way through the last of Burt's choking, so now. Sirocco entered some commands on the touchboard, and a second later a document appeared on the screen. Colman got up and came across to study it while Sirocco sat back. Old Yeller returns to him. He thinks she's offering the usual doggy commiseration, maybe laughing at him. husband utterly lacking in character, such a spouse was the moral equivalent of arm candy, meant to. "Aunt Gen and Uncle Vernon owned a little corner grocery," Micky explained, "which is like being. out of the booth and rose to his feet. "You wouldn't do something stupid like take the money and then not. hideous and distressing story, but they could do nothing to help her. Leilani knew better than anyone that. "Three SDs and a slightly plump, middle-aged matron trying to climb over the fence," Hanlon said. "The woman was stuck on the top and making quite a fuss. Now, what do you imagine they could have been trying to run away from?" A boy and his dog can form astonishing, profound connections. He knows this to be true not entirely. At last the quality of this bestial voice frightened her into halting the assault on the snake. It was dead. Well, it's not difficult to see who the next target would be, is it. The facilities are extensive and fascinating, featuring seven stalls, a bank of five urinals from which arises. Coming in, he'd known the risks. What he hadn't realized, until now, was that the motor home has no. "It wouldn't have worked," Wellesley countered. "We'd simply have remained shut up behind a fence, ignored, and looking ridiculous." The propulsion systems master control computer monitored the final stages of phase-down of the burn and shutdown the main-drive reactors. As the huge reaction dish that had contained the force of two tons of matter being annihilated into energy every second for six months began to cool, the ship was nudged gently into high orbit at 25,000 miles by its vernier steering motors and configured itself fully for freefall conditions to become a new star moving across the night skies of Chiron. "You do. Don't you like it when your team wins in the Bowl? Why do you work hard at school? You like science, sure, but isn't a lot of it proving to everybody that you're smarter than all the assholes who are dumber than you, and getting a kick out of it? Be honest. And when you were a kid, didn't you have gangs with special passwords and secret signs that only a handful of very special pals were allowed into? I bet you did." The woman stopped and ran her eye curiously over their faces for a moment while they shuffled and straightened up self-consciously. "You don't have to stand around out here like this as far as we're concerned, you know," she said. "You can come on inside if you want. How about a coffee, and maybe something to eat?" The

faces turned instinctively toward Colman as he rejoined them..By the time the flyer touched down at the front of the house, Celia's earlier nervousness had given way to a stoic resignation to the fact that she was now committed. She had gambled that Stern would accept her desire to return to her home as normal feminine behavior and that because he believed her to be helpless and without anyone else to run to anyway, the thought of her trying to escape would not enter his mind seriously. That - was just how it had worked out; her three SD guards and a matron had orders to keep her under observation and from talking to anybody, but she was not considered to be a prisoner. Her only worry now was that Veronica might have failed to contact Colman or that for some reason he might have been unable to do anything..Jerked up and jammed down, the lever handle doesn't release the latch, but pulled inward, it works.,The atmosphere generally was cheerful enough: entertainments, what appeared to be business premises, a few bars and eating places, an art exhibition, and, incongruously, a troupe of clowns performing, mid-corridor, to a delighted audience. In one place a collection of dressmaking machinery was at work behind a window, whether for production or, as a demonstration of some kind was impossible to tell..Leilani didn't want to cross him by calling paramedics to clean and dress the snakebite..this weakness, she continued eating even though her throat grew so thick with emotion that she had.bursting with potential in this rank, mildew-riddled bathroom. Leilani knew that many intelligent.,Bernard shook his head in a way that said he rejected the suggestion totally. "They wont they're not like that. They just don't think that way."..Obviously something unusual was going on. Unwilling to leave the subject there, Bernard said, "And Walters too maybe? Perhaps he could use a refresher too,".The beer provided icy solace. "How do you stay so upbeat?"."I knew they were faithless, shiftless," Geneva continued.. "Hey, kid."."I hope they're not going to start shooting each other up here. It would be pretty scary in orbit. They could decompress the whole ship."..The plosive squeal of air brakes, recklessly applied so late, reveals the driver not as a man at the mercy.Ahead, Old Yeller drops the sandal and turns right, between two slopped vehicles. Curtis follows. The."Stop," Micky said, dismayed to hear the word come out with a harsh edge. Then more softly: "Just.from the reptile's crawspace, she breathed rapidly, noisily, through her mouth, and her tongue translated.Adam also had an older sister--to the surprise of the Terrans--who designed navigation equipment for spacecraft at an establishment located inland from the Peninsula, a twin brother who was an architect and. rumored to be getting friendly with a lively redhead from the Mayflower H whom Colman couldn't place, a younger sister who lived with two other teenagers somewhere in Franklin, and a still younger half-brother, not a son of Kath's, who was with their father in Selene. It was all very confusing..excuses or complaining. I'm lucky there was ice cream and not just marijuana brownies. Heck, I'm lucky.Colman watched for a moment, then turned slowly back and began moving toward the bulkhead door. He didn't feel resentful, nor particularly surprised. He'd seen it all too many times before. Fallows wasn't a bad guy; somebody somewhere had jumped on him, that was all. "He might know all about how machines work," Colman murmured half-aloud to himself as he returned to the gallery outside the Bomb Factory. "But he doesn't understand how they think."..self-assurance, her wit, and her indomitable spirit made it hard to think of her as disabled, even now."A dinner guest?"..Rickster's hands were cupped together as though they concealed a treasure that he was bearing as a gift."Oh. Yeah. My dog," the boy says, feeling stupid and dismally incompetent at this.off your ears with an electric carving knife just to change the subject..crosslight of the moon and the fading purple dusk, but that probably matched Leilani's shade of blond..produced on your side," he told her.. "He's quite the philosopher."..to stiffen your spine, work up some spit, open the damn door, go in there where the beast was, and you.blurred, and she heard vintage feeling wash through her words. "I could hope . . . one day I might be." "You've already said it," Eve told him. She studied the expression on his face for a few seconds and then smiled. "You can't see it yet, can you, Paul?"..As the Windchaser slows steadily, Curtis slides shut the window and takes up a position at the bedroom.Beautiful at twelve, still half beautiful, she lay on her left side, presenting only her right profile, which was.The inverted logic that had puzzled him had not been something peculiar to the military mind; it was just that the military mind was the only one he had ever really known. The inversions came from the whole insane system that the Military was just a part of-the system that fought wars to protect peace and enslaved nations by liberating them; that turned hatred and revenge into the will of an all benevolent God and programmed its litanies into the minds of children; that burned and tortured its heretics while preaching forgiveness, and made a sin of love and a virtue of murder; and which brought lunatics to power by demanding requirements of office that no balanced mind could meet. A lot of things were becoming clearer now as the Chironians relentlessly pulled the curtain away..case one of the congressman's minions coiled in a car outside, waiting to follow the woman, Noah must.Across the room in the sunken area below the wall screen, Bernard, Lechat, Colman, and Jay resumed their conversation. "We don't know what they've got exactly, but it's pretty devastating," Jay told Colman. "We figure they've already tested it. There's an extra crater on one of the moons-a couple of hundred miles across-that wasn't there a year ago. Imagine if whatever did that was to hit the ship."..Stern, in a maroon dinner jacket and black tie, watched her silently through impenetrable, liquid-brown eyes while the steward filled two brandy glasses, set them alongside the decanter on a low table, then departed with his trolley. Through the meal Stern talked about Earth and the voyage, and Celia had found herself following his lead, leaving him the initiative of broaching the subject of her visit. Finally.. "Present . . . arms!" Sirocco barked, and twenty-two palms slapped against twenty-two breech casings at the same instant.. "I remember him shooting Vernon. I wish I didn't, but] do." Earlier, sadness had cast a gray shadow."the garden." That would be the rosebush.. "With active opposition around, you wouldn't want to be risking complications with remote links into it." He was telling Lechat that if the transmission was going to go out, that was where it would have to go out from and that was where Lechat would have to go to make it. But more to the point, as Lechat well knew, Bernard was saying that Celia would have to go there too; what she had to say couldn't come second-hand through anybody else..she was caught in a trap

nobody could pry open for her, that to have any hope of escape, she must chew. What-. The capsule arrived, and Jay fell silent while he digested what Pernak had said. As they climbed inside, Jay entered a code into the panel by the door to specify their destination in the Jersey module, and they sat down on an empty pair of facing seats as the capsule began to move. After a short run up to speed, it entered a tube to exit from Maryland and passed through one of the spherical intermodule housings that supported the Ring and contained the bearings and pivoting mechanisms for adjusting the module orientations to the ship's state of motion. For a brief period they were looking out through a transparent outer shell at the immensity of the Spindle, seemingly supported by a web of structural booms and tie-bars three miles above their heads, with the vastness of space extending away on either side, and then they entered the Kansas module where the scene outside changed to animal grazing enclosures, level upon level of agricultural traits, fish farms, and hydroponics tanks. "Mrs. D," Leilani said to Geneva, "that creepy rosebush of yours just made obscene gestures at me." "I hung it in the hallway," Veronica said, getting up. She walked ahead and out the door while Mrs. Crayford waddled a few feet behind. "Don't bother bringing anything out, Celia," Veronica's voice called back. "I'll come back in for the things." The Chironian studied him for a second or two longer, then grunted softly at the back of his throat somewhere. "We didn't do that," he said. "After we told 'em they were cooped up, some of 'em started shooting. Five of 'em tried making a break, holding a white shirt up to tell us they wanted out. We held back, but a couple of the others gunned 'em down from behind while they were running. She was one of those five." The Chironian turned his head for a moment and spat onto the ground in the shadow beneath the aircraft. "After that, one-half of the bunch that was left started shooting it out with the other half- maybe because of what they'd done, or maybe because they wanted to quit too- and at the end of it there were maybe three or four left. We hadn't done a thing. Padawski was one of 'em, and there were a couple of others just as mean and crazy. Didn't leave us with too much of a problem." "I don't like the idea of a limited military presence down there," Borftein said. "We're trusting the Chironians too much. I still say they could have strength that they're not showing yet. We could be exposing those civilians to all kinds of risks--terrorism, provocations. What if they get hit by surprise? I've seen it all before." "an achievable goal to give up booze without a Twelve Step program." "He's a broad-spectrum, three-hundred-sixty-degree, inside-out, all-the-way-around, perfect, true, and. The failure to achieve sassy status still wasn't the reason she was ashamed of herself, but she was getting. And Micky said to Leilani, "Did he kill your brother, Lukipela?" "Neither have I. But the idea appeals to me. And so right after he married Sinnezilla, he said that even." "It doesn't matter," Colman told him. "It's different in different places. It might be the best hunter in the village or the guy who's killed the most lions. It might be the way you paint your face. Through most of history it's been money. What you buy with it isn't important. What's important is that the things you buy say to all the other guys, 'I've got what it takes to earn what you have to, to buy all this stuff, and you haven't. Therefore I'm better than you.' That's what it's all about." "You want a glass?" she asked. "The bottle's probably cleaner." "Has to be," she agreed as she headed to hear it. "final bill you mentioned?" "Well, that was up to you. We told you." "They soon find out," Juanita said it as if it explained everything. "slap-slap-slap of his sneakers echoes between the bank and the trees, slap-slap-slap, a spoor of sound." "What's the problem?" Bernard, who had finished talking to Jeeves for the time being, came over to them. Marie followed close behind. "porch roof at the Hammond farmhouse, surely the mutt can clear the truck entirely, avoiding the vertical." "It's an organization the congressman founded. That's where he made a name for himself, before. It was the right thing to do. She collected her wits quickly, shouldered the roll at an angle across the back of her neck, and followed him into the lounge. Colman went ahead to stand peering through tile doorway from one side while soldiers came and went in bewildering confusion and then he motioned her out suddenly. In a strangely dreamlike way she found herself being conveyed down the stairway between two soldiers who were keeping up a steady exchange about something not being large enough and a typical screw-up somewhere, and then she was outside and crossing the rear parking area toward a personnel carrier standing a short distance back behind some other vehicles. Suddenly, without really remembering getting in, she was sitting in the cabin, "figures materialized swiftly and silently from the darkness and jumped in after her. The last of them closed the door, the engine started, and she felt herself being lifted. Only then did she start shaking. Colman felt something cold deep in his stomach even before his mind had fully registered what Brad had said. "Sterm?" he repeated numbly. He licked his lips, which had gone suddenly dry, and looked from one of the SD majors to the other. "You mean he's already in there?" As the Mayflower II wheeled slowly in space high above Chiron, the outer door of Shuttle Bay 6 on the Vandenberg module separated into four sectors which swung apart like the petals of an enormous metal flower to expose the nose of the surface lander nestling within. After a short delay, the shuttle fell suddenly away under the rotational impetus of its mother-ship, and thirty seconds later fired its engines to come round onto a course that would take it to the Kuan-yin, orbiting ten thousand miles below. "Oh, little mouse, what's wrong with me that I let the child go back there?" She had a trick of locking her brace and pivoting on her steel-assisted leg. Even as she heard the hiss or. "I have no idea," Colman said, grinning. Even Celia found that she had to bite her lip to prevent herself from laughing. "So what happened? Did you send them back up?" The night heat couldn't bake the chill from Micky's bones. In memory she saw the fury-tightened face of. "Oh? When was your last workout?" Most self-mutilators were deeply self-involved. A small number could be confidently diagnosed as. body or pop me into a brand-new body identical to this one but with no imperfections. Anyway, that's. "One of our people has been killed, and there are set procedures that we have to follow," the major announced. "My orders require me to take you three back with us. It would make things a lot easier for everybody if you complied. I'm sorry, but I don't have any choice." "of air fosters the dry sound of a long-dead sea. Whether the serpent moved slowly because it was hurt or because it was being cautious to deceive." "If you mean systems of beliefs based, despite their superficial appearances to the contrary, on morbid obsessions with death, hatred, decay, dehumanization, and

humiliation, then the answer to your question is no," she said, looking at Colman. She glanced at her grandchildren. "But if a dedication to life, love, growth, achievement, and the powers of human creativity qualify in your definition, then yes, you could say that Chiron has its religion." Around and under more prep tables, past tall cabinets with open shelves full of stacked dishes, taking. Kath had moved away to talk to Adam, Casey, and Veronica, who were sitting together beyond the table at which Driscoll was performing. Although he was beginning to feel more at ease with her than he had initially, Colman was still having to work at getting used to the feeling of being accepted freely and naturally by somebody like her, and of being treated as if he were somebody special from the Mayflower ii. On the first occasion that he had walked with her from Adam's place to The Two Moons, he had felt somewhat like Lurch, Adam's klutz robot-awkward, out of place, and uncertain of what to talk about or how to handle the situation. But all through that evening, despite the shooting episode, on the way back and at Adam's afterward, and when he had met her in town for a meal after coming off duty the following day, she had continued to show the same free and easy attitude. Gradually he had relaxed his defenses, but it still puzzled him that somebody who was a director of a fusion plant, or whatever she did exactly, should act that way toward an engineer sergeant demoted to an infantry company. Why would she do something like that? For that matter, why would any Chironian be interested more than just socially in any Terran at all? Face. Eyes. So much to lose. Get out. Leave. But they'd bring her back. And where would the snake be. "Excuse me," he said to the bargain-basement Thor as the hammer arced high over the hood again, and. "Technically you're right," Kath agreed. She raised her head to look at the pictures of her children on the wall with a faraway look in her eyes. "They might be scattered all over the planet, and the way they live might be a little strange compared to what you're used to, but it's a happy family in its own way," she murmured. "But it's still not really the same. It doesn't really feel as if any part of it has any link to anything that happened before fifty years ago. Don't you think it's ... oh, I don't know, kind of a shame somehow?". distinctive curve of a cantle, the slope of a seat, pommel, fork, and horn: a saddle.. Adam seemed to think about it for a long time. "No ..." he said slowly at last. "We're on our own on a grain of dust somewhere in a gas of galaxies. Inventing guardian angels for company won't change it. Whether we make it or not is up to us. If we mess it up, the universe out there won't miss us." He paused to study the expression on Colman's face, then went on, "It's not really so cold and lonely when you think about it. True, it means we have to get along without any supernatural big brothers to control Nature for us and solve our problems, but what are we losing if they don't exist anyway? On the other hand, we don't have to fear all the nonsense that gets invented along with them either. That means we're completely free to decide our own destiny and trust in our own reason. To me that's not such a bad feeling." Music began playing, the crowd dispersed back to the bar and tables, and conversations started to pick up again. Colman and his companions went back upstairs, and Driscoll collected another round of drinks from the bar while the others sat where they had been earlier. They talked for a while about the incident, agreed it was a bad thing to have happened, wondered what would come of it, and eventually changed the subject.. heat withered common sense and wilted reason, Micky decided that they were setting a new standard for. Celia had become very thoughtful in the last few seconds. She waited for the talking to subside for a moment, and then said, "If we have to go up to the ship anyway, it might be possible to make this far more effective than what we've been talking about so far." She paused, but nobody interrupted. "I know where the people who have been arrested." "You don't know where you were born?"
