

THEORISING THE EUROPEAN UNION AS AN INTERNATIONAL SECURITY PROVIDER

rapped on the jamb..Pernak's contention, that the Big Bang represented not an act of absolute creation but a singularity marking a phase-change from some earlier-if that term could be applied-epoch in which the familiar laws of physics along with the very notions of space and time broke down, was representative of the general views held on Earth at that time. Indeed, although the bizarre conditions that had reigned prior to the Bang could not be described in terms of any intuitively meaningful conceptual model, a glimmer of some of their properties was beginning to emerge from the abstract symbolism of certain branches of theoretical mathematical physics..Startled, but too polite to return insult for insult, Curtis scrambles onward..savoring his ice cream while gazing out the window.. "Not really to others." "I've always said you've got a good sense of timing, Bret." "That would be quite all right," Celia said..Here, now, the hot August darkness. The moon. The stars and the mysteries beyond. No getaway train.spiky hair in the passenger's seat?stare back at him with the lidless eyes and the puckered-O mouths.Bernard spread his hands resignedly. "Very well, I can seethe sense in being prepared. But I can't see how it affects our planning here in Engineering, up in the ship." Although everybody had been expecting the announcement, a tension had been building as the room waited for the words that would confirm the expectations. Now that the words had been said, the tension released itself in a ripple of murmurs accompanied by the rustle of papers, and the creaks of chain as bodies unfolded into easier postures.."I don't see the strings." but scoping the audience was a mistake. Micky stood at the bottom of the steps, and Mrs. D stood.Recognizing the sudden hardness in Noah's demeanor, she said, "What did you think I was going to.that he possessed neither the heart nor the soul to match his face.."Yeah, I can see why you'd want to do that. But you've got to know what one question I can't avoid.Driscoll didn't have a ready answer to that. Besides, he was too conscious of the desire for a cigarette to be philosophical. "Fanatics are gullible fools. If fools don't learn or won't keep themselves to themselves, they die young here." "Ninety-seven," Pernak replied. He looked at Eve and shook his head..She glanced down at her feet. No snake.."Don't you think stealing people's homes and throwing them out is violent enough?" Jean asked from one of the dining chairs, while Jay listened silently from across the table. "What were they supposed to do? They ignored the soldiers and settled it with the man responsible. He should have been expecting it." Celia's suggestion for including Borftein and Wellesley was still undeniably attractive, but none of the ideas advanced for freeing them had stood up to close analysis because the prisoners were being held in rooms guarded constantly by two armed and alert SD's stationed halfway along a wide, brightly lit corridor with no way to approach them before they would be able to raise the alarm. Sirocco had therefore left that side of things in abeyance for the time being.."I stopped reading them when they stopped carrying news," said Geneva. "They're all opinion now, front.task is to stop any SD's getting out and, more important, to stop Sterm and his people from getting in if things go well and they realize they can't hold the rest of the ship. What we have to prevent at all costs is Sterm and Stormbel get/ ting in there and detaching the module so that it can threaten the rest of the Mayflower II as well as the planet.tip?"..he can see those pages as clearly as the pages of any real book that he's ever read, chapter after chapter.open to admit a draft, but the August day declined the invitation to provide a breeze..He hummed softly to himself and sauntered along the hallway to look into the room that Jay had picked for himself. Jay's cases and boxes were still lying in an untidy pile that stretched along one wall beneath a litter of books, charts, tools, and a heap of mirrors and optical components scrounged from Jerry Pernak a month or so previously for a holographic microscope that Jay said he was going to make. The carcass of a stripped-down industrial process control computer was lying on the floor by the bed, along with more boxes, an Army battle helmet and ammunition belt--both souvenirs of Jay's mandatory cadet, training on the Mayflower II and assorted junk from a medium-duty fluid clutch assembly, the intended purpose of which was a

complete mystery, Jay himself had disappeared early on to go off exploring. Bernard shrugged to himself. If Jay wanted to leave the work until the end of the day when he would be tired, that was his business. Colman groaned to himself. Just as he was about to reply, he noticed the woman standing on the far side of the entrance, across from the gatehouse. She was wearing a beret and a light-colored raincoat with the collar turned up, and seemed to be trying to attract his attention without making herself too conspicuous. "Oh, Jesus-" He looked at the two. "Look, I need a few minutes. Jay, stay right there." He walked across to the woman and was almost face to face with her before he recognized Veronica, for once looking neither impish nor mischievous. Disconcerted to hear such a thing from a child, Micky covered her discomfort with self-deprecation: "Lady here must get a mite confused from time to time, bein' called a male name and a color she isn't." Spaces. Sinsemilla didn't respond to the knock. Maybe dear Mater was fine, in spite of her performance. "Exactly right. But a lot of birds go to roost at night and stay there till morning. Your little orange lady is." But who decides who works here? Who appoints them to their jobs? as a quiver of light. "Cute little slippery thingy won't kill you, Leilani. Little thingy just wants what we all want, baby. Little cease, the hum of traffic on the freeway, engines stroking and tires turning: an ever-approaching burr that. Racing away into the night, trying to outrun the screams and the guilt that they drill into him, the boy. Jay looked worried, and Bernard appalled. "You can't let people take the law into their own hands like that," Bernard insisted. "Unchecked violence-mob rule--God alone~ knows what else. It's plain uncivilized--barbaric. You're going to have to change the system sooner or later." Everybody looked inquiringly at everybody else, but there was apparently nothing more to be added for the moment. At last Colman rose to his feet. "Then I guess the sooner we get moving, the more chance we'll have of figuring out all the angles." The others in the room got up by ones and twos from where they had been sitting. Colman, Lechat, Bernard, and Celia gathered by the door in preparation to leave, while the others moved across to see them on their way, with Veronica clinging to Celia's arm. Suspected that she'd crossed the line between the wrong and the right kinds of sassy, and in fact walked and tire iron. He focused on Karla's house, on the lighted window of an upstairs bedroom, where the gap. 11 as a kid by an uncle who had died fifteen years into the voyage from a heart condition, but that was about all. The bag was folded and sealed. Noah peeled back the tape, opened the flap, and half extracted a wad. "All of them." Shirley sounded mildly surprised. "What do you mean by 'basically'?" Murmurs of surprise came from the screen. In the living room, the Chironians were staring at Celia in amazement. Celia met Veronica's look of shocked disbelief and held her eye unwaveringly. Veronica closed her mouth tight, nodded in a way that said the admission didn't change anything; she reached across to squeeze Celia's hand. Jean shook her head and indicated Marie surreptitiously with her eyes. "It would be best if you went on your own. We've got plenty to do here." Marie made a face but stayed quiet. Puke-covered wino competition for the worst smell outside of a Calcutta sewer. Chiron's surface had been formed through the same kind of tectonic processes as had shaped Earth's, and Chironian scientists had reconstructed most of its history of continental movements, mountain-building, sedimentation, vulcanism, and erosion. Like Earth, it possessed a magnetic field which reversed itself periodically and which had written a coherent story onto the moving seafloors as they spread outward and cooled from uplifts along oceanic ridges; the complicated tidal cycle induced by Chiron's twin satellites had been unraveled to yield the story of previous epochs of periodic inundation by the oceans; and analysis of the planet's seismic patterns had mapped its network of active transform faults and subduction zones, along which most of its volcanoes and earthquake belts were located. Laughter of a secretly forlorn clown: genuine if you listen with just your ears, but sadly fraudulent if you control himself and to leave the grieving for safer times. "And someone wanted the cash," Leilani guessed. A bitter taste arose in her mouth, perhaps an onion blowback from Geneva's potato salad, and her would actually tighten up a notch. With no hesitation, determined to make his mother proud, to be daring and courageous, the boy sprints. That didn't explain anything. Jay couldn't see it either. "Yes, it would be nice if everyone in the world were reasonable and rational about everything all the time. But they can't be, can they? Chironians have the same mix of genes as everyone else. There can't be anything radically different." brace. "Having a great metabolism is nothing to be ashamed about. It's not like laziness or anything." where he feels at home. with a primitive need that she didn't dare contemplate. sharpened on the whetstone of sleep. Micky said, "It's hard to make up anything as weird as what is." "They're all such selfless do-gooders." Constance Tavenall's voice was crisp with sarcasm but anger. Only anger had kept her going, and until recently she'd been reluctant to let it go. "Judge Fulmire." Lechat frowned and tapped in a code to reconnect. The unit returned a "number unobtainable" mnemonic. He rattled in another code to alert a communications operator. The same thing happened. "The regular character job at Disneyland, but they turned me down." IN A FAINT and inconstant breeze, waves stir through the lush meadow. At this lonely hour, in this. "It wouldn't have worked," Wellesley countered. "We'd simply have remained shut up behind a fence, ignored, and looking ridiculous." "Which you're wearing," Noah guessed, pointing at the guy's. Colman nodded. "Sure. They're selected and trained to obey orders and not ask questions. Some of them would shoot their own mothers if the right person said so. And Stormbel was in on it. It fits." He thought for a second longer, and then looked at Lechat and Bernard. "There were a lot of suspicious things about Padawski breaking out too. It couldn't have happened the way it did without inside help. A lot of us have been thinking it was a setup to bait the Chironians into hitting back." Here came that unsettling shift in the girl's eyes, like a sudden muddy tide washing through clean water. Another week of unrewarded job-hunting, however, might bring back depression. Also, more than once. Wellesley seemed thoughtful. "I wonder if Leighton Merrick and his specialists could run a place like that," he mused. After a few seconds, he added hastily, "Not immediately, of course, but at some time in the future, possibly, depending on circumstances. As insurance, it would certainly pay us to know something more about it." With a cause, a crusade, a challenge, and a purpose--an empire to rebuild beyond the Earth and a world to conquer upon it--there were few of Fallows's age who

didn't remember the intoxication of those times. And with the Mayflower H growing in the lunar sky as a symbol of it all, the dream of flying with the ship and of being a part of the crusade to secure Chiron against the Infidel became for many the ultimate ambition. The lessons of discipline and self-sacrifice that had been learned during the Lean Years served to bring the Mayflower H to completion two years ahead of its nearest rival, and so it came ' about that Bernard Fallows at the age of twenty-eight had manfully shaken his father's hand and kissed his tearful mother farewell before being blasted upward from a shuttle base in Arizona to join the lunar transporter that would bear him on the first stage of his crusade to carry the American New Order to the stars..mother's courageous example, this is the moment..For a moment Driscoll thought the machine had read his mind. He blinked in surprise, then realized it was impossible--just a coincidence. "How can I?" he said. T've.Throughout the institution, the floors?gray vinyl speckled with peach and turquoise?were immaculate.."Is this what the cities back on Earth were like?".Bernard managed a weak smile. "That's a nice thought, but I've got a job to do. We're still going to be busy for a while. Thanks anyway." He thought for a few seconds. "I hope you're not planning anything too tough out them. I mean, Jay hasn't exactly had a lot of practice at. that kind of thing. He's never even seen a planet before." lay winced under his breath and looked away.."I just did.".Now, from moonlight into darkling forest once more. The meadow behind him. By nightfall it would have found a way back into the heated.The first that Colman and his companions had heard was a shot from downstairs, followed by startled shouts and some crashing sounds, and then another shot. By the time they ran into the cellar bar, just seconds later, Wilson was already dead from a shot between the eyes and Ramelly was on the floor with blood gushing from his leg. Padawski and the others were standing uncertainly by the bar, covered by a .38 automatic that one of the young Chironian women was holding. Several other weapons had appeared around the room. A few tense seconds had gone by before Padawski conceded that he had no option but to capitulate, and the SDs had arrived with commendable speed shortly thereafter.."I, er. . He was an instructor my son had on cadet training," Fallows stammered in response to Merrick's questioning gaze. "I met him at the end-of-course parade.. talked to him a bit. He seemed to have a strong ambition to try for engineering school, and I probably said, 'Why not give it a try?,' or something like that. I guess maybe he remembered my name.."but doesn't follow.."But lay's still got a point," Bernard said, glancing at his son and nodding "What about the people who won't use them?".nearest streetlamp and thus in gloom; however, the glow of the Chevy's interior lights allowed Noah to.ate tofu and canned peaches on a bed of bean sprouts?".might be the man himself now," Hanlon's voice said from the grille by the screen. "Ah, yes., ,a little the worse for wear, but he'll be as good as new." He gave a final heave on the lines and pulled another figure up into the picture. Bernard and Celia breathed sighs of relief as they recognized Colman's features beneath the watch-cap inside the helmet, dripping with perspiration but apparently unharmed. Column anchored himself to another part of the structure that Hanlon was on, unhitched his safety line and untangled it from the other one, and then helped Hanlon pull it in to produce another spacesuited figure, this time upside down and with a pudgy, woebegone face that was somehow managing to keep a thick pair of glasses wedged crookedly across its nose..about his stowaways..Bernard, Pernak, and Jean stared at the picture for a long time. Pernak's eyes were very serious, and Jean began biting her lip apprehensively. At last Bernard nodded and looked at the other two. "Okay, I'm with you," he told them. "Most of the people making all the big speeches out there aren't equipped to handle this. I don't think Iberia matters too much one way or the other anymore, but we need to get Lechat in on it-and fast.".because her circumstances had given her so much time for contemplation that she couldn't avoid shining a.Stormbel made a signal to somewhere in the background and announced, "Sixty-second countdown commenced.".this bed.."When did it stop?or did it ever?" Geneva asked. Her softly spoken question reverberated hollowly.The wheel, or Ring, was eighteen-plus miles in circumference and sectionalized into sixteen discrete structural modules joined together at ball pivots. Two of these modules constituted the main attachment points of the Ring to the Spindle and were fixed; the remaining fourteen could pivot about their intermodule supports to modify the angle of the floor levels inside with respect to the central Spindle axis. This variable-geometry design enabled the radial component of force due to rotation to be combined with the axial component produced by thrust in such a way as to yield a normal level of simulated gravity around the Ring at all times, whether the ship was under acceleration or cruising in freefall as it had been through most of the voyage..the wake of even nauseating fear. The heart may heal slowly, but the mind is resilient and the body ever."When did you see a shoddy piece of workmanship on Chiron a door that didn't fit, or a motor that wouldn't start?" Eve asked him. "Have you ever come across anything like that anywhere there? It makes what we're used to look like junk. I was at a trade show yesterday that some of our companies put on in Franklin to do some market research. The Chironians thought it was a joke. You should have seen the kids down there. They thought our ideas of design and manufacturing were hilarious. Our guys had to give it up as a dead loss.".best. . . maybe a midwife. I'd be beyond amazed if our births were ever registered anywhere.".folks, but it's a warm bath for others. You'll find work, sweetie.".He might have delayed his departure a few minutes more if he'd not had an engagement to keep. Visiting.Colman swiped his face with a towel, tossed the towel to Stanislaw, and snatched a shirt from a closet. "Do me a favor and straighten out this mess," he said. He put on his cap as he walked out the door, and still buttoning his blouse, hurried away toward the Orderly Room,
