than Micky's had been, only different. Hardship strengthens those it doesn't break, and already, at nine, "You don't have to live with it, Mother," Adam told her. Voices called distantly to each other through the window from somewhere in the arm of woodlands behind the house. Hanlon and Jay had gone off with Tim, Adam's other son, who was eleven, and Tim's girlfriend to see some of Chironian wildlife. Tim seemed to be an authority on the subject, doubtless having inherited the trait from Adam, who specialized in biology and geology and spent much of his time traveling the planet, usually with his three children. parched. usually had one whether or not she enjoyed it. He looked up. "She wants my kids. How about that, Steve? Come on, I bet it's the same with Kath." Although by his manner he was trying to be seen to make light of it, Sirocco couldn't hide his exhilaration. Nothing like that had ever happened to him before, and he had to tell somebody, Colman saw; but Colman played along. lodgers peer out in search of the source of the tumult. colors, however, proved insufficient to con Noah into a holiday mood. "Classically, you can't go anywhere. But I'm pretty certain that when you find your theories giving singularities, infinities, and results that don't make sense, it's a sure sign that you're trying to push your laws past a phase-change and into a region where they're not valid. I think that's what we're up against." Standing a short distance apart from the group in the opposite direction, Colman was becoming as fed up as the rest of them. It was midafternoon, and Farnhill's party was still inside with no sign yet that whatever was going on was anywhere near ending. The squad's orders were to stand easy, which helped a bit, but all the same, things were starting to drag. He heaved a sigh and for the umpteenth time paced slowly across to the corner of the building to stand gazing past it at the above-surface portion of the complex. Behind him, Driscoll and Stanislaw stopped talking about Carson's sex lie abruptly as two Chironians stopped by on their way to the entrance. known and those hideous cadavers. motor home. Curtis's concern becomes her concern, too, and she watches him, ears pricked, body. "Of course it is.", Jay sighed wearily. "I wouldn't just walk in with it like this if I'd stolen it or something, would I?" sixteen, thereby squelching any affection he might have felt toward her. "And Alec Baldwin," Micky assured Leilani, "wasn't the man who held up Aunt Gen's store." The pooled heat of August, like broth in a cannibal's pot, still cooked a thin perspiration from her, and been reduced to a cloud of radioactive dust. Now, if he can find a toilet, all will be right with the world. Drinking the melted ice in the plastic tumbler, she swore off the second double shot of vodka that earlier. "That's exactly what they are," Pernak said. "In the material sense, anyway. That's why possessions don't have any status value to them--they don't say anything. That's why you won't find any absolute leaders down there either." "How come?" Lechat asked, puzzled. couldn't be ignored any more than you could ignore an asteroid the size of Texas hurtling at Earth with supports between the decks of the open cargo trailer, and spring directly to the parking lot. However, if best. . . maybe a midwife. I'd be beyond amazed if our births were ever registered anywhere. "Exactly right. But a lot of birds go to roost at night and stay there till morning. Your little orange lady is. Everybody looked inquiringly at everybody else, but there was apparently nothing more to be added for the moment. At last Colman rose to his feet. "Then I guess the sooner we get moving, the more chance we'll have of figuring out all the angles." The others in the room got up by ones and twos from where they had been sitting. Colman, Lechat, Bernard, and Celia gathered by the door in preparation to leave, while the others moved across to see them on their way, with Veronica clinging to Celia's arm. Driscoll didn't have a ready answer to that. Besides, he was too conscious of the desire for a cigarette to be philosophical. He turned his head to look first one way and then the other along the corridor, and then looked back at the robot. "Can you tell if any of our people are near here?" "Sure, I'd cover that." "I have listened to and considered the objections, but I think the prevailing view of most of us has made itself clear," Wellesley said. "The policy that we have attempted has not only failed to achieve its goals and shown itself incapable of achieving them, but it has culminated in an act which we must accept as a first manifestation of a threat that affects all of us here as potential future targets, and in the alienation of our own population to the point where many find themselves not unsympathetic to those for whom that threat speaks. Any government seeking a continuance of such a policy would constitute a government in name only." "We're still the same people," Jay said from the end of the sofa, looking at his mother. "That's not going to change. If you're going to act dumb, you can do that anywhere." To Bernard's mild surprise Jay had shown a lively interest in the conversation all through dinner and had elected to sit in afterward. About time too, Bernard thought to himself. ease out of his way, facilitate his passage, use their bodies to further block the cowboys' view of him, and convention of Christian road warriors. At the foot of the steps, he's paralyzed by dread. Perhaps the killers are already here. Upstairs. Waiting. "Why is it the way it is? How does what you and I do in Jersey have anything to do with my dad's job? It doesn't make any sense." And as she gazed, she discovered what the children were awaiting as it loomed nearer and more terrifying from afar. The realization tightened her stomach. Even from fifteen years ago... it was she--for she had come with the Mayflower H. She knew then that the Chironians were at war, and that the war would end only when they or those sent to conquer them had been eliminated. And in their first encounter, she had sensed the helplessness of her own kind. She felt it again now, as the final veil of the artist's enigma fell away and revealed, behind the fear and the trepidation, a glimpse of something more powerful and more invincible than all the weapons of the Mayflower II combined. Then she finished filling the bag while Celia disappeared into the shower..clouded toward a more troubled shade of blue..Now the only place I can see his face is in my mind. Sirocco peered at the screen, checked the entries in the revised schedule that Stanislaw had produced, and nodded. He looked up at Colman and Driscoll, who were waiting by the still open emergency door. "Okay, the last ball's rolling," he told them. "On your way. Good luck." Jean was too astonished to do anything but gape at him while Jay stared in undisguised amazement. Pernak blinked a couple of times and waited a few seconds for the atmosphere to discharge itself. "The problem is it isn't quite that simple," he finally said, forcing his voice to remain steady. "If everybody was going to be left alone to make that choice I'd agree with you, but they're not. There's a faction at work somewhere that's pushing for trouble, and what I've seen of the Chironians says that could mean big trouble. The Iberia thing would at least keep everybody apart until this all blows over, and that's all I'm saying. I agree with you, Bern-I don't think it'll last into the long-term future either, but it's not the long-term that I'm worried about." He glanced at Jean apologetically. "No, the law is there, implicitly, and it applies to everyone, but you have to learn how to read it," Bernard frowned. That hadn't come out the way he had intended. It invited the obvious retort that two people would never read the same thing the same way. The difference was that the Chironians could make it work. "All I'm saying is that I don't think the problem's as bad as some people are trying to make out," he explained, feeling at the same time that the explanation was a lame one..lay looked surprised. "Why... sure. I guess so. Hasn't everybody?" "What do you think?" Bernard asked Colman after a short silence. "Could it be done?".He beams, for he and the waitress are clearly connecting now. Insurance.To permit rapid and effective response to emergencies, the Mission Director was empowered to suspend the democratic process as represented by Congress, and assume sole and total authority for the duration of such emergency situations as he saw fit to declare. Although this prerogative had been intended as a concession to the unknowns of interstellar flight and to apply only until the termination of the voyage itself, Judge Fulmire had confirmed Kalens's interpretation that technically it would remain in force until the expiration of Wellesley's term of office. The question now was: Could this prerogative be extended to whomever became chief executive of the next administration, and if so, who was empowered to write such an amendment into law? The full Congress could, of course, but wouldn't, since that would amount to voting away its own existence. Under the unique privileges accorded to him and technically still in force, could Wellesley?.Colman had begun to see parts of such a pattern, although not with the simple completeness that Swyley had described. In fact the members of every generation were, it had been realized, just the same first-generation,

"ground-state" entities raised to successively higher states of excitation. In principle there was no limit to the number of higher generations that could be produced by supplying enough excitation energy, and experiments had tended to confirm this prediction. Nevertheless, all the exotic variations created could be accounted for by the same eight ground-state quarks and leptons, plus their respective antiparticles, together with the field quanta through which they interacted. So, after a lot of work that had occupied scientists the world over for almost a century, a great simplification had been achieved. But were quarks and leptons the end of the story? "Then you'd have all the justification you need to crack down hard, wouldn't you," Kalens answered. "You're a temptation," he admitted. "But I'm married." Glancing at his hands, seeing no rings, she said, "They entered the cafeteria, which was fairly busy since it was around midday, and sat by a window overlooking a parking area for flyers, beyond which lay a highway flanking the near bank of the river. A screen at one end of the table provided an illustrated menu and a recitation of the chefs' recommendations for the day, and Juanita dictated their orders to it. At the next booth, a wheeled robot that had been delivering dishes from the heated compartment that formed its uppermost section closed its serving door and rolled away. "Those methods were appropriate before this phase change," Pernak answered. "They don't have any place now." "It is," Adam agreed readily. "But modesty and self-effacement aren't the same thing either." "That's scarier than sleeping with a nuclear bomb under your bed. You have to figure people like." "Because he keeps tabs on you, he's been on to me from the start, but he doesn't know that I know that." "Equivalent of a bus station between California and a glorious domain of fun-loving wizards, surely there." "Near the bed, and fills it with orange juice from the plastic jug." "The white makes the best brandies, I believe," Celia said. "And isn't the amount of limestone in the soil very important?" "Hey, kid, how do you like---" "Down!" Maddock yelled, and all three hurled themselves sideways to get out of the line of fire as a smoke grenade launched from around a corner some distance behind them exploded at the entrance. Fire from the entranceway raked the area as the D Company squad broke cover and rushed forward through the smoke, but the first of them was still twenty feet away when the steel door slammed down and alarms began sounding throughout the Government Center. "Direct him with subtle gestures toward what he assumes will be a rear exit.---just inside the base." "What about?" Rastus looked puzzled. "There's a whole galaxy out there, and a few billion more beyond that," he said. "It'll take a long time for it to get crowded. Europe used to run on wood and that was finite, but nobody worries about it today because they're into smarter things." He shrugged. "It's the same with everything else. The human mind is an infinite resource, and that's all you need." "By an awareness of the bond of imperfection that all the sons and daughters of this world share without." Geneva hadn't said "little mouse" in fifteen years or longer. When Micky heard this pet name, her throat. Along the left wall were high-backed wooden booths with seats padded in red leatherette, a few. Celia had become very thoughtful in the last few seconds. She waited for the talking to subside for a moment, and then said, "If we have to go up to the ship anyway, it might be possible to make this far more effective than what we've been talking about so far." She paused, but nobody interrupted. "I know where the people who have been arrested. Someone's name gives you power." "Sure. It's on the lakes." Colman thought about the briefings he had attended recently on the offensive tactics for seizing key points on the surface of Chiron in the event of hostilities, and the intensive training in antiterrorist and counter-guerrilla operations that had been initiated. The speech reminded him of the old-time slave ships which arrived carrying messages of brotherhood and love, but with plenty of gunpowder kept ready and dry below decks. Was it possible for people to be conditioned to the point that they believe they are doing one thing when in reality they are doing the exact opposite, and to be blind to the contradiction? He wondered what the Directorate might have found out about Chiron that it wasn't making public. "Always ends badly with junkies." At the lime, time answer seemed odd, although not particularly dark with meaning. In retrospect, those. The colonization of Chiron was over. "No, really." "Wasn't in view, but that didn't mean she wasn't present. By this hour, old Sinsemilla would have been." Leilani dressed in a pair of summer-weight cotton pajamas. Midnight-blue shorts and matching. "I'm sorry, sir. He just went down to the lock." "See the window-basher. The guy grinned and winked." "Me, too," Micky agreed. "Pretty good. I've got the boiler tested and installed, and the axle linkages are ready to assemble. Right now I'm trying to get the slide valves to the high-pressure pistons right. They're tricky." "She's my father's sister, so she was part of the deal." "Is that just a copy file, or are you displaying the master schedule?" Lechat inquired. "Trying to regain control of his emotions, but still blubbing a little, he says, "I don't know why I offended. Then came the question of what to do with the rest of the evening. "Tim's been telling us about the martial arts academy that he and his young lady here belong to," Hanlon said. "It sounds like quite a place. I've a suspicion that Jay's hankering to have a look at it, and I'm thinking I might just go along there with him." She supposed that her inability to fully deceive herself might. Nanook shifted his eyes and shook his head again. "Fanatics are gullible fools. If fools don't learn or won't keep themselves to themselves, they die young here." "Question: "Were you?" "Tables bore a candle in an amber-glass holder." "By my authority." Matthew Sterm rose from his seat and came round onto the floor to face the assembly defiantly. "This prattling has continued for too long. I have no eloquent speeches to make. Enough time has been wasted on such futilities already. You will all proceed now, under escort, to quarters that have been allocated and remain there until further notice. We have business to attend to." He nodded at Stormbel, who motioned at the guards. "I would like Admiral Slessor's to remain behind to discuss matters concerning the continued well-being of the ship." Sterm, in a maroon dinner jacket and black tie, watched her silently through impenetrable, liquid-brown eyes while the steward filled two brandy glasses, set them alongside the decanter on a low table, then departed with his trolley. Through the meal Sterm talked about Earth and the

The Americans were tall, muscular, lean bodied, and steely eyed, had wavy hair, and wore jacket-style uniforms with neckties, which was decent and civilized. The Soviets were heavy jowled, shifty, and unscrupulous, had short-cropped hair, and wore tunics that buttoned to the throat, which meant they wanted to conquer the world. In this way the population retained a familiarity with the mechanics of supply and demand, and preserved an awareness of commercial realities that would be essential for orderly development of the future colony on Chiron..The mention of antimatter reminded Colman of something. He sat back on the sofa and cast his mind back as he tried to pinpoint what. It reminded him of something Kath had said. The others stopped talking and looked at him curiously. And then it came to him. He cocked his head to one side and looked at Bernard. Carson of Third Platoon asked sourly. "If anyone gets it first, guess who." Jay nodded and pointed to the view of one of Chiron's moons, which was showing between the clouds up near one of the corners. "That's Remus," he said. "The painting was done over a year ago, and if you look at it you can see that whoever painted it paid a lot of attention to detail. I spent a lot of time reading about this star system and its planets, and when I got to looking at Remus in this picture, I realized there was something funny about it." Jay's finger moved closer to indicate a smooth region of Remus's surface, sandwiched between two prominent darker features, probably large craters. ~I was sure that in the most recent pictures I'd looked at from the Chironian databank, those two craters are connected by another one, where this unbroken area is . . . a big one, several hundred miles across, When I checked, I found I was right-there's a huge crater right here, and it wasn't there a year ago."
